<sup>4</sup> Childhood obesity is defined as having a gender-specific body mass index (BMI)-for-age  $\geq$  95th percentile. Prevalence of childhood obesity was determined by using BMI measurements of 5th, 7th, and 9th grade public school children from the 2005 annual California Physical Fitness Testing Program.

<sup>5</sup> Premature mortality associated with cardiovascular disease was calculated by adding the total number of years of life lost before age 75 years for all deaths caused by heart disease or stroke from 2000—2002.

<sup>6</sup> Parks include parks, beaches, historical parks, open spaces, recreational areas, forests, and wilderness areas. To account for the number of people parks serve, park area per capita was used to indicate park acres in each city/ community per 1,000 persons.

<sup>7</sup> The economic hardship index was measured by combining six indicators: crowded housing, percent of households living below the federal poverty level, percent of persons over the age of 16 years that are unemployed, percent of persons over the age of 25 years without a high school education, dependency, and median income per capita. The index compares 142 incorporated cities, communities (or Census-designated places), and Los Angeles city council districts. Data for these indicators were obtained from the 2000 U.S. Census.

**District Enrollment by Ethnicity**

**Policy Recommendations for School Districts and Schools**

- Improve the quality and increase the quantity of physical education instruction time.
- Establish district-level policy outlining district commitment to joint/shared use and providing district support for joint/shared use practice that goes beyond the Civic Center Act to provide community access to school recreational facilities after school hours.
- Establish district-level policies prohibiting the withholding of recess or use of physical activity as punishment.
- Establish safe routes to schools.
- Modify existing school wellness policies to ensure joint/shared and community use agreements are included.
- Site schools where they will promote physical activity, support smart growth and stronger communities, and avoid adverse impacts on neighborhood traffic patterns.
