

Community Baby Shower Outreach

Childhood Lead Poisoning Prevention Program: Reaching out

Susanna Lam, MPH, CHES

Goal

 To target pregnant women to help reduce the risk factors for childhood lead poisoning

Objectives

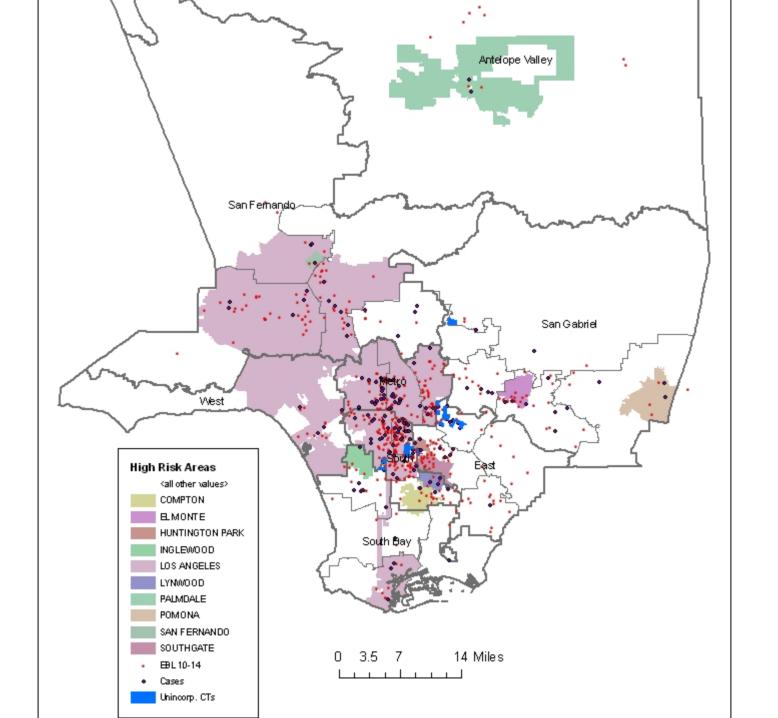

- On a quarterly basis, hold a baby shower with a neighboring facility to inform pregnant women and their guests about the dangers of Lead Poisoning to their unborn child
- During our quarterly attendance at the baby shower, we will provide a 20-30 minute educational piece on Lead Poisoning in Children
- At the conclusion of each baby shower pregnant mothers receive a gift

Objectives Continued...

- During the educational piece, mothers and family members will:
 - understand the importance of blood lead screening and learn to identify various sources of lead exposure
 - understand practical strategies that protect children from lead exposure during early growth and development
 - understand rights as tenants in an environment with potential lead hazards

High Risk Areas

- 2000 Census Data (children 1-2 years old, pre-1950 housing)
- Birth Records 2003 (Medi-Cal deliveries)
- Select Top 10 Cities which have more than one high-risk CT, and high number of EBLs

Partners

- St. Francis Medical Center
- SPA 5&6, South Health Center
- Olive View-UCLA Comprehensive Medical Center

Education

- Bilingual Presentation (Co-taught)
- Lead Bingo Game

Booths for Educational Resources

- Once a month, invited to St. Francis Medical Center to set up a booth
- To provide information to women of child bearing age not in attendance at the educational sessions
