Planning Division

Annual Review of Participants in Alcohol and Drug Programs

Contracted by the
Alcohol and Drug Program Administration
2004-05 Fiscal Year

Executive Summary

Introduction

The tenth Annual Review is a comprehensive descriptive report on the participants who received various types of treatment/recovery services from alcohol and drug programs contracted with the Los Angeles County Alcohol and Drug Program Administration (ADPA) during the 2004-05 Fiscal Year. Note that the majority of information and statistics presented in the Annual Review is based on participant admission and discharge information collected through ADPA's Los Angeles County Participant Reporting System (LACPRS). LACPRS is an ongoing, standardized, computer-supported system sustained by a close working relationship between ADPA and contracted alcohol and drug program providers.

The 2004-05 Annual Review is composed of the following seven chapters:

- ❖ Chapter 1 provides statistical information on the entire ADPA-funded Los Angeles County Alcohol and Drug Treatment Program. This includes a participant description of the 2004-05 Fiscal Year and trend information over the past five fiscal years.
- ❖ Chapter 2 starts with a description of adult treatment services by program types and continues with a statistical presentation of 2004-05 adult program admissions, participant demographics, participant outcomes, and concludes with a statistical summary of several key adult program trends that occurred over the past five fiscal years, 2000-01 to 2004-05.
- ❖ Chapter 3 explains how some youth are targeted and received services from traditional ADPA-contracted alcohol and drug treatment programs. This chapter includes a statistical presentation of 2004-05 Fiscal Year youth program admissions, participant demographics, participant outcomes, and concludes with a five fiscal year statistical summary of several key youth service program trends.
- ❖ Chapter 4 covers youth who received services from a special youth-focused program known as Adolescent Intervention, Treatment, and Recovery Program (AITRP). Statistical presentations of 2004-05 Fiscal Year youth AITRP admissions, participant demographics, and participant outcomes are provided. This chapter also includes a five fiscal year summary of several key AITRP trends and ends with a statistical description of participant demographics by each AITRP agency for the 2004-05 Fiscal Year.
- ❖ Chapter 5 provides admission, participant, and outcome trend statistics by special programs designed to serve the following special populations: criminal justice defendants, homeless individuals, needle users, persons with co-occurring mental illness and substance abuse problems, pregnant and parenting women, and public assistance recipients.
- ❖ Chapter 6 provides participant-related demographic statistics for each of the 151 agencies contracted with ADPA to provide alcohol and drug treatment/recovery services during the 2004-05 Fiscal Year.
- ❖ Chapter 7 is composed of numerous "Fact Sheets" which cover key Los Angeles County alcohol and drug-related indicators and outcomes.

ADPA-Funded Alcohol and Drug Treatment/Recovery Program Admissions

During the 2004-05 Fiscal Year, ADPA contracted with 151 community-based agencies that provided the following types of required alcohol and drug treatment programs in Los Angeles County.

Table 1 - Type and Number of Treatment Programs, 2004-05 Fiscal Year

<u>Non-Residential Programs</u>	<u>Number</u>	<u>Residential Programs</u>	<u>Number</u>
Day Care	43	Residential Detoxification	11
Outpatient Counseling	205	Residential Services	99
Narcotic Treatment Detoxification	18		
Narcotic Treatment Maintenance	26		

During the 2004-05 Fiscal Year, 151 ADPA contracted community-based agencies provided treatment/recovery services to a total of 56,048 participants who accounted for 68,785 program admissions

Table 2 shows that a total of 59,219 adult (86.1%) and 9,566 youth (13.9%) admissions to treatment were reported during the 2004-05 Fiscal Year. The majority of adults (66.4%) and youth (87.6%) admissions were to non-residential treatment/recovery programs. Approximately 30% or three out of every 10 youth admitted participated in the Adolescent Intervention, Treatment, and Recovery Program (AITRP).

Table 2 – 2004-05 Fiscal Year Adult and Youth/AITRP Treatment Services Participant Admissions by Service Division

Service Division	Adult Treatment Services		Youth/AITRP Treatment Services		Total Treatment Services	
	Number	Percent	Number	Percent	Number	Percent
Non-Residential	39,297	66.4	8,378 <i>Youth - 5,982 (71.4%) AITRP - 2,396 (28.6%)</i>	87.6	47,675	69.3
Residential	19,922	33.6	1,188 <i>Youth - 600 (50.5%) AITRP - 588 (49.5%)</i>	12.4	21,110	30.7
Total	59,219	100.0	9,566 <i>Youth - 6,582 (68.8%) AITRP - 2,984 (31.2%)</i>	100.0	68,785	100.0

Table 3 shows that each of the five fiscal years (2000-01 to 2004-05), the number of annual program admissions have increased. Over the five fiscal years, the annual number of admissions to programs increased by 39% and the total number of individual participants increased by 38%.

Table 3 - Total Number of Admissions and Participants
by Fiscal Year

Fiscal Year	Treatment/Recovery Programs	
	Admissions	Participants
2000-01	49,470	40,631
2001-02	51,363	42,314
2002-03	55,814	45,747
2003-04	67,811	53,892
2004-05	68,785	56,048

Source: Los Angeles County Participant Reporting System

Treatment/Recovery admissions to programs increased by 39% over five fiscal years (2000-01 to 2004-05)

Participant Characteristics

During the 2004-05 Fiscal Year, most of the treatment/recovery program participants were male (66.0%); Latino (40.6%), White (27.9%), or Black/African American (24.0%); between 25 and 44 years of age (48.5%); had 9 to 12 years of education (74.5%); and unemployed (72.4%). Methamphetamine (24.5%) was the most frequently reported primary drug problem followed by alcohol (20.1%) and cocaine/crack (19.2%). Over five fiscal years (2000-01 to 2004-05), the number of participants reporting methamphetamine as their primary drug problem has increased each year.

Methamphetamine use doubled over five fiscal years, 12.5% to 24.5% (2000-01 to 2004-05)

Participants' Positive Treatment Compliance

Participants with "Positive Compliance" are those who completed treatment or left before completing treatment with satisfactory progress. Each of the past five fiscal years (2000-01 to 2004-05), approximately half of the Los Angeles County Alcohol and Drug Treatment Program participants had positive treatment outcomes.

Each of the past five fiscal years, 2000-01 to 2004-05, 50% or more of the participants left treatment programs with a status of positive compliance. They successfully complied with their individualized treatment plans.

Adult Services

Adult program participant characteristics were relatively similar across program types. Regardless of program type, the majority of participants were male, between 25 and 44 years of age, had 9 to 12 years of education, and were unemployed. Most participants were Latino, White, or Black/African American. The notable exceptions for the 2004-05 Fiscal Year were:

- Of the six program types, only day care programs provided services primarily to female participants (84.7%). Day care participants are required to attend scheduled, formalized treatment at least three hours per day, three times per week.
- Narcotic treatment programs served the largest proportion of older adult program participants. Among the narcotic treatment programs (detoxification and maintenance), half of the participants were between 45 and 64 years of age, 50.6% and 51.0%, respectively.

Narcotic Treatment Programs served the largest proportion of older adult participants, 45 to 64 years of age.

- Methamphetamine was the most frequently reported primary drug problem for three program types; day care (38.1%), outpatient counseling (29.2%), and residential services (33.3%). Over 90% of participants in narcotic treatment programs reported heroin as their primary drug problem. This is to be expected since by design narcotic treatment programs provide services to individuals addicted to heroin or other morphine-like drugs. Heroin (43.2%) also ranked as the number one drug problem for participants who received residential detoxification services.

Table 4 shows adult service positive treatment compliance by program type. Positive outcomes varied among program types. However, residential programs had higher percentages of positive compliance. The majority of participants in residential detoxification (74.2%) and residential services (63.6%) complied with their treatment plans.

Table 4 – 2004-05 Fiscal Year Adult Services
Positive Treatment Compliance

Program Type	Discharges	Positive Compliance	
		Number	Percent
Non-Residential			
Day Care	767	277	36.1
Outpatient Counseling	12,412	5,106	41.1
NTP – Detoxification	1,101	522	47.4
NTP – Maintenance	700	175	25.0
Residential			
Detoxification	4,655	3,452	74.2
Residential Services	8,644	5,495	63.6
Overall	28,279	15,027	53.1

The majority of adult participants in residential detoxification (74.2%) and residential services (63.6%) had positive treatment outcomes.

Youth/AITRP Services

For the 2004-05 Fiscal Year, most of the youth/AITRP participants were male, Latino, between 14 and 17 years of age, completed 9 to 12 years of education, and were unemployed. The majority of participants in non-residential programs reported marijuana as their primary drug problem. In residential service programs, youth/AITRP participants reported either marijuana or methamphetamine as their primary drug problem. Over the five fiscal years (2000-01 to 2004-05), there has been a steady increase in reported methamphetamine use by residential youth/AITRP participants.

Most Youth/AITRP participants were male, Latino, between 14 and 17 years of age, and reported marijuana as their primary drug problem.

As seen in Table 5, overall 57.2% of Youth/AITRP participants had positive treatment outcomes. Approximately 6 out of 10 of the day care and outpatient counseling participants left treatment with a positive compliance status, 60.7% and 58.3%, respectively. About half (49.3%) of the residential youth/AITRP participants successfully complied with their treatment plans.

Table 5 – 2004-05 Fiscal Year Youth/AITRP Services
Positive Treatment Compliance

Program Type	Discharges	Positive Compliance	
		Number	Percent
Day Care	616	374	60.7
Outpatient Counseling	2,534	1,477	58.3
Residential Services	603	297	49.3
Overall	3,753	2,148	57.2

On the average, 50% to 60% Youth/AITRP participants departed treatment services with a positive compliance status.

Special Populations

ADPA-contracted treatment/recovery programs address specific needs of certain populations such as criminal justice defendants, homeless individuals, needle users, persons with co-occurring mental illness and substance abuse problems, pregnant and parenting women, and public assistance recipients. Table 6 provides a summary of the special populations who received services during the 2004-05 Fiscal Year.

Table 6 – 2004-05 Fiscal Year Special Population Admissions and Participants

Special Population	Admissions	Participants	Target Group
CalWORKs' Recipients	2,249	1,910	CalWORKs' (welfare reform) recipients with alcohol/drug problems
Co-Occurring Disorders	10,720	9,223	Individuals with co-occurring mental illness and substance abuse problems
Drug Court Defendants	2,014	1,636	Non-violent drug offenders
Female Offenders Project	111	96	Female inmates from California Institute for Women in Frontera
General Relief Recipients	4,321	3,888	General Relief (indigent adults) recipients with alcohol/drug problems
Homeless Individuals	12,160	10,260	Individuals living on the street or in an emergency shelter due to lack of financial resources or community ties
Needle Users	12,014	9,473	Intravenous drug users
Perinatal Services Network	1,263	1,159	Pregnant and parenting women and their children
Pregnant Women	1,135	1,016	Pregnant women
Prison Parolee Network	733	654	Male and female offenders, paroled to Los Angeles County
Proposition 36 Defendants	15,601	12,660	Non-violent drug offenders

Salient findings regarding special population outcomes are:

- During the 2004-05 Fiscal Year, the most prominent primary drug problem reported by CalWORKs program participants was methamphetamine. The percent of CalWORKs participants who reported methamphetamine as their primary drug has more than doubled over the past five fiscal years, from 17.8% in 2000-01 to 40.3% in 2004-05.
- The average percent of CalWORKs participants with positive treatment compliance each of the five fiscal years was 49.3%. More specifically, over five fiscal years, 3,183 of the 6,471 CalWORKs recipients discharged from alcohol and drug treatment/recovery programs successfully complied with their treatment plans.
- Admissions for participants with co-occurring mental illness and substance abuse problems more than doubled over five fiscal years; 4,780 in 2000-01 to 10,720 in 2004-05. Over five years, most program participants reported alcohol, cocaine/crack, or methamphetamine as their primary drug problem.
- Over five fiscal years, the majority of drug court participants reported cocaine or methamphetamine as their primary substance abuse problem. Each of the past five fiscal years, the majority (56.3% to 70.9%) of the drug court program participants were discharged with a positive treatment compliance status.
- During the five fiscal year time period, cocaine/crack remained the most prominent primary drug problem for female offenders despite the drop from 71.6% in 2000-01 to 47.9% in 2004-05. During the 2004-05 Fiscal Year, 61.0% of the female offender participants were discharged with a positive treatment compliance status.
- Alcohol was the most frequently reported primary drug problem for general relief participants over the past five fiscal years. From 2000-01 to 2004-05, there was a downward trend in alcohol use (35.9% to 28.1%) while methamphetamine use (11.4% to 25.1%) increased.

- A total of 49,611 homeless participants have been admitted to ADPA-funded alcohol and drug treatment/recovery programs over the last five fiscal years, 2000-01 to 2004-05. Homeless participants reporting mental health concerns increased from 12.1% in 2000-01 to 27.1% in 2003-04 and then slightly declined to 21.9% in 2004-05.
- In 2004-05, the most prominent drug problems reported by homeless participants were cocaine/crack (27.6%), methamphetamine (26.9%), and alcohol (20.6%). Each fiscal year, approximately 6 out of 10 homeless participants successfully complied with their treatment plan.
- Each fiscal year, heroin was the primary drug problem for three-fourths of needle users. Noteworthy is the twofold increase in needle users reporting methamphetamine as their primary drug problem, 8.6% in 2000-01 to 15.2% in 2004-05.
- Over the five fiscal years, the majority (56.4 to 66.5%) of perinatal program participants received services from a day care program. Perinatal participants were most likely to report cocaine/crack or methamphetamine as their primary drug problem. While cocaine/crack (42.0% to 24.7%) has declined each of the five fiscal years; methamphetamine (21.3% to 41.9%) use has increased.
- The number of pregnant women in alcohol and drug treatment/recovery programs has increased by 25.0% (815 to 1,016) over the five fiscal years. During the 2004-05 Fiscal Year, 5.3% (1,016 of 19,081) of female participants reported being pregnant. Over the last three fiscal years (2002-03 to 2004-05), methamphetamine was the most frequently reported primary drug problem followed by cocaine/crack.
- In 2004-05, nearly one-third of the PPN participants reported either cocaine/crack (32.4%) or methamphetamine (32.1%). Methamphetamine use doubled during the five year period (15.6% in 2000-01 to 32.1% in 2004-05).
- Since implementation in July 2001, Proposition 36 participants have increased from 3,595 in 2001-02 to 12,660 in 2004-05. From 2002-03 to 2004-05, methamphetamine ranked as the number one drug problem. Over the four fiscal years, approximately 4 out of 10 Proposition 36 participants were discharged with a positive treatment compliance status.

Introduction

The tenth Annual Review is a comprehensive description of participants who received alcohol and drug treatment/recovery services during the 2004-05 Fiscal Year. This review describes the alcohol and drug treatment/recovery program participants by the following services:

- ◆ Adult Services – These are traditional ADPA-contracted residential and non-residential alcohol and drug treatment/recovery program services (day care, detoxification, outpatient, and residential) provided predominantly to individuals who are 18 years of age and older.
- ◆ Youth /Adolescent Intervention, Treatment and Recovery Program Services
 1. Youth Services - Many of the traditional ADPA-contracted alcohol and drug treatment/recovery programs also serve a target population of youth, individuals who are between 12 and 20 years of age with substance abuse problems.
 2. Adolescent Intervention, Treatment, and Recovery Program Services – In November 2000, ADPA implemented a special youth-focused program known as the Adolescent Intervention, Treatment, and Recovery Programs. This program consists of ADPA-contracted agencies that have specific expertise in providing culturally sensitive and developmentally appropriate services for individuals 12 to 21 years of age.

The 2004-05 Annual Review starts with Chapter 1 which provides statistical information on the entire ADPA-funded Los Angeles County Alcohol and Drug Treatment Program. Chapter 2 provides a description of adult treatment services by program types and continues with statistical presentations of the 2004-05 adult program admissions, participant demographics, participant outcomes, and then concludes with a summary of several adult program trends for the past five fiscal years. This same format is repeated for Chapter 3 Youth Services and Chapter 4 Adolescent Intervention, Treatment, and Recovery Programs. Chapter 5 provides admission, participant, and outcome trend statistics for special populations. Chapter 6 provides participant-related demographics for each of the 151 community-based agencies contracted with ADPA during the 2004-05 Fiscal Year. Chapter 7 is composed of numerous “Fact Sheets” which cover key Los Angeles County alcohol and drug-related indicators and outcomes.

The majority of the information found in the Annual Review is based on participant admission and discharge data collected through ADPA’s Los Angeles County Participant Reporting System (LACPRS). LACPRS is an ongoing, standardized, computer-supported system sustained by a close working relationship between ADPA and contracted alcohol and drug program providers.

For the purposes of this report, participant and program admission are defined, as follows:

- (1) A participant is an individual who is admitted and becomes actively engaged in an alcohol or drug treatment program.
- (2) A program admission is a treatment event that starts when the program admits the participant.

The Annual Review includes all participants who received services in ADPA-contracted treatment/recovery programs. This review does not include information on participants who received substance abuse services at facilities operated by federal agencies in Los Angeles County (e.g., the Veterans Administration), crisis intervention facilities (e.g., hospital emergency departments), private entities, and other publicly funded non-ADPA contracted programs. The Annual Review does not include information on ADPA-contracted prevention programs and their participants.

Acknowledgments:

Special thanks are extended to program providers for their submission of information to ADPA. Without their cooperation and support, the information necessary for the preparation of the Annual Review would not have been possible.

Chapter 1 – LAC Alcohol and Drug Treatment Program

Introduction

Alcohol and Drug Program Administration (ADPA) contracted community-based agencies provide a range of treatment and recovery services to County residents with alcohol and other drug problems. All of the contracted programs combined make-up what is called the overall Los Angeles County (LAC) Alcohol and Drug Treatment Program. Each time an individual enters or departs from a program, admission and discharge information is collected. Since a participant may be admitted to more than one program during a fiscal year, or return to the same program more than once, the number of admissions can be greater than the number of individual participants.

Adult and Youth/Adolescent Intervention, Treatment, and Recovery Program Services

Over the years, ADPA has encouraged and supported the provision of alcohol and drug program services by community-based providers in response to federal and State mandates and community needs. For reporting purposes, these services are categorized as follows:

A. Adult Services

These are traditional ADPA-contracted residential and non-residential alcohol and drug treatment/recovery program services (day care, detoxification, outpatient, and residential) provided predominantly to individuals who are 18 years of age and older. During the 2004-05 Fiscal Year, 149 agencies managed 374 programs that provided adult services at 291 facility site locations throughout Los Angeles County.

B. Youth/Adolescent Intervention, Treatment and Recovery Program Services

1. Youth Services - Many of the traditional ADPA-contracted alcohol and drug treatment/recovery programs also serve a target population of youth, individuals who are between 12 and 20 years of age with alcohol and drug problems. A total of 48 agencies managed 76 programs that provided youth services at 66 facility site locations in Los Angeles County.
2. Adolescent Intervention, Treatment, and Recovery Program Services - In November 2000, ADPA implemented a special youth-focused program known as the Adolescent Intervention, Treatment, and Recovery Program (AITRP). This program consists of ADPA-contracted agencies that have specific expertise in providing culturally sensitive and developmentally appropriate services for individuals 12 to 21 years of age. During the 2004-05 Fiscal Year, 14 agencies provided 34 youth residential and outpatient program services in 30 facility site locations dispersed throughout Los Angeles County.

Table 1.1 shows the number of program admissions for adult and youth/AITRP services.

Participant Demographics

During the 2004-05 Fiscal Year, ADPA contracted with 151 community-based agencies. These agencies operated 401 programs at 306 facility sites located throughout the County. LAC Alcohol and Drug Treatment Program provided services to a total of 56,048 participants who accounted for 68,785 treatment/recovery program admissions. Most of the participants were male (66.0%); Latino (40.6%), White (27.9%), or Black/African American (24.0%); between 25 and 44 years of age (48.5%); had 9 to 12 years of education (74.5%); and unemployed (72.4%). Methamphetamine (24.5%) use was the most frequently reported primary drug problem followed by alcohol (20.1%) and cocaine/crack (19.2%).

LAC Alcohol and Drug Treatment Program Trends

Admission and Participant Trends

Table 1.3 shows the number of annual participants and program admissions from 2000-01 to 2004-05 fiscal years. Over the five fiscal years, the total number of annual admissions increased by 39.0% and individual participants increased by 37.9%.

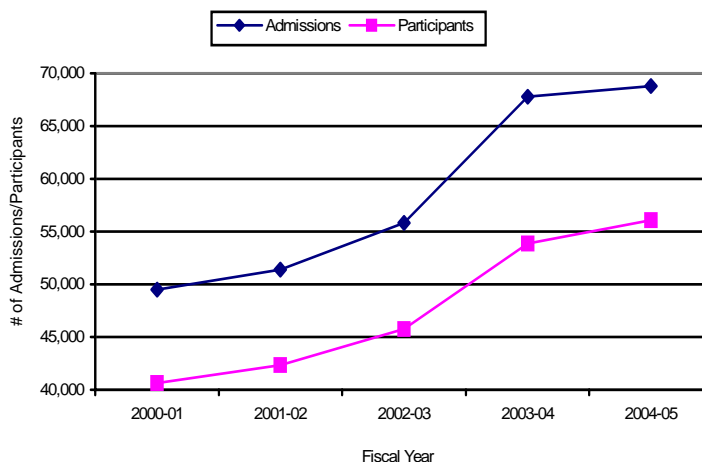

Table 1.3 - Total Number of Admissions and Participants by Fiscal Year

Fiscal Year	Treatment/Recovery Programs	
	Admissions	Participants
2000-01	49,470	40,631
2001-02	51,363	42,314
2002-03	55,814	45,747
2003-04	67,811	53,892
2004-05	68,785	56,048

Source: Los Angeles County Participant Reporting System

Figure 1.1 graphically shows the constant increase in program admissions and participants. Over the last two fiscal years (2003-04 to 2004-05), more participants had two or more admissions during the fiscal year. This shows an increase in the use of available services.

Figure 1.1 - Total Number of Admissions and Participants by Fiscal Year

Primary Drug Problem Trends

The primary drug problems for five fiscal years (2000-01 to 2004-05) are shown in Table 1.4. Alcohol, cocaine/crack, and marijuana remained relatively constant during this period. There was a downward trend for participants who reported heroin as their primary drug. One notable change in participant primary drug problem over these five fiscal years has been the steady increase in methamphetamine use. During the 2004-05 Fiscal Year, methamphetamine was the most frequently reported participant primary drug problem.

Table 1.4 – Participant Primary Drug Problem by Fiscal Year¹

Participant Treatment Compliance Trends

Table 1.5 shows treatment compliance over five fiscal years (2000-01 to 2004-05). Participants with “Positive Compliance” are those who completed treatment or left before completing treatment with satisfactory progress. “Negative Compliance” refers to those participants who left before completing treatment with unsatisfactory progress. Each fiscal year, approximately half of the program participants had positive treatment outcomes. These participants complied with their program’s required treatment plan.

Table 1.5 - Participant Treatment Compliance/Discharge Status by Fiscal Year

Chapter 2 – LAC Adult Services

Introduction

Chapter 2 describes the participants in the adult alcohol and drug treatment/recovery program by division and program type. Traditional Alcohol and Drug Program Administration (ADPA) contracted alcohol and drug treatment/recovery adult services are provided predominantly to individuals 18 years of age and older. During the 2004-05 Fiscal Year, 149 individual community-based agencies operated 374 adult treatment programs at 291 different facility sites located throughout Los Angeles County.

Adult alcohol and drug treatment/recovery programs are classified as either non-residential or residential and as one of the following six program types:

Non-Residential – Participants reside outside of the program facility while receiving treatment/recovery services.

- Day Care Programs provide counseling and recovery services to persons who have drug and/or alcohol-related problems. The primary purpose of these services is to provide a planned treatment program in a social setting structured to maximize recovery and rehabilitation of participants. These programs services are more intensive than a visit (person-to-person contact) but less extensive than 24-hour residential services. The services are usually available a minimum of six hours per day, six days per week.
- Outpatient Counseling Programs provide crisis intervention, counseling, and participant referral services to individuals affected by alcohol and/or drug-related problems. Services may include participant screening and assessment, development of treatment plans, individual and group counseling, hosting mutual self-help groups, coordination with other agencies, and referral to other resources. This program is designed to provide an alcohol and drug-free environment with structure and supervision to further a participant's ability to improve his/her level of functioning.
- Narcotic Treatment Detoxification Programs administer or furnish methadone and/or levo-alpha-acetylmethadol (LAAM) in decreasing doses for a period not to exceed 21 days to assist an individuals' withdrawal from dependency on heroin or other morphine-like drugs. Services may include intake and physical examination, casework services, an individualized treatment plan, body fluid testing, coordination of additional services with other agencies, and referrals to other resources.
- Narcotic Treatment Maintenance Programs administer methadone/LAAM, at relatively stable dosage levels for a period in excess of 21 days, as an oral substitute narcotic drug. The treatment protocol is accompanied by ancillary social and medical services for individuals 18 years of age or older who have a history of two or more years of dependence on heroin or other morphine-like drugs and two or more failures in alternative treatment programs. Services may include intake and assessment, body fluid testing, group and family counseling, crisis intervention, coordinating additional services with other agencies, and participant follow-up.

Residential – Participants reside in a drug-free program facility, operating on a 24-hour per day basis, receiving food and shelter as part of the treatment/recovery service.

- Residential Detoxification Services provide care and treatment for person suffering from the withdrawal symptoms of alcohol and/or other drugs in a non-medical setting. These services are generally offered as preparation for entry into a treatment and recovery program, therefore, the medical and psychological supports are provided. Services may include physical examination and medical history, medication as needed, recidivism counseling, referrals to other resources, and after care planning.

Chapter 2

- Residential Services is a 24-hour live-in, drug-free treatment environment for persons with drug and/or alcohol-related problems. Participants are to be involved in no less than six hours of planned treatment activities per day under the supervision of trained staff. Services may include intake and participant screening, room and meals, crisis intervention, individual and group counseling, host mutual self-help group discussions, and social and recreational activities.

Adult Services by Division and Program Type

As shown in Table 2.1, a total of 59,219 admissions to adult services were reported during the 2004-05 Fiscal Year. The majority (66.4%) of admissions were to non-residential programs, specifically outpatient counseling programs (54.0%). One out of every 4 (24.9%) admissions was to a residential services program.

Table 2.1 - Admissions by Division and Program Type
2004-05 Fiscal Year

Division/Program Type	Admissions

Day Care Programs

During the 2004-05 Fiscal Year, 1,802 unique participants accounted for 1,961 admissions to day care programs; 141 (7.8%) of these participants had two or more admissions.

According to Table 2.2, several key day care program participant findings are

- 84.7% were female;
- 67.8% were between 25 and 44 years of age;
- 38.2% were Black/African American or 31.7% Latino; and
- 38.1% reported methamphetamine or 27.0% reported cocaine/crack as their primary drug problem.

Outpatient Counseling Programs

Table 2.4 shows that during the 2004-05 Fiscal Year, 28,107 participants accounted for 31,949 admissions to outpatient counseling programs; 3,288 (11.7%) of these participants had two or more admissions.

Most outpatient counseling program participants were:

- male (67.7%);
- between 25 and 44 years of age (56.8%);
- Latino (38.7%), White (27.7%) or Black/African American (26.4%); and
- reported methamphetamine (29.2%), cocaine/crack (24.3%), or alcohol (22.2%) as their primary drug problem.

Narcotic Treatment Detoxification Programs

As shown in Table 2.6, during the 2004-05 Fiscal Year, 1,358 participants accounted for 1,553 admissions to narcotic treatment detoxification programs; 153 (11.3%) of these participants had two or more admissions.

According to statistical findings:

- 71.5% were male;
- 50.6% were between 45 and 64 years of age;
- most participants were Latino (45.4%) or White (33.6%); and
- 94.0% of the participants reported heroin as their primary drug problem.

Narcotic Treatment Maintenance Programs

According to Table 2.8, during the 2004-05 Fiscal Year, 3,552 participants accounted for 3,834 admissions to narcotic treatment maintenance programs; 243 (6.8%) of these participants had two or more admissions.

According to statistical findings:

- 64.0% were male;
- 51.0% were between 45 and 64 years of age;
- most participants were White (39.2%) or Latino (38.7%); and
- 93.0% of the participants reported heroin as their primary drug problem.

Residential Detoxification Services

As shown in Table 2.10, during the 2004-05 Fiscal Year, 4,540 participants accounted for 5,171 admissions to residential detoxification programs; 483 (10.6%) of these participants had two or more admissions.

Most residential detoxification program participants were:

- male (73.5%);
- between 25 and 44 years of age (56.7%);
- White (44.8%) or Latino (34.2%); and
- reported either heroin (43.2%) or alcohol (23.5%) as their primary drug problem.

Adult Program Trends

Overall Adult Program Admission and Participant Trends

Table 2.14 shows the number of adult program admissions and participants increased each of the five fiscal years. Overall, from 2000-01 to 2004-05, program admissions increased by 28.0%. The number of participants followed the same pattern and increased by 27.0%.

Table 2.14 – Overall Adult Program Admissions and Participants by Fiscal Year

Chapter 2

Figure 2.1 provides a visual presentation of how program admissions and participants increased each of the five fiscal years, 2000-01 to 2004-05.

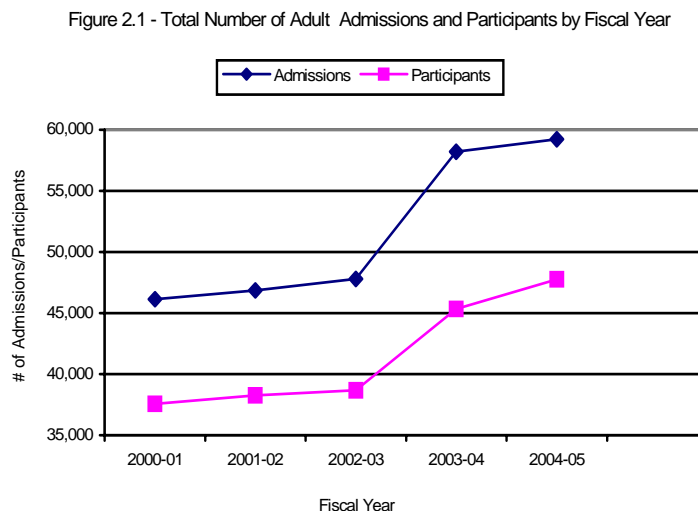

Table 2.15 shows adult admission trends over five fiscal years by the four non-residential program types and the overall adult non-residential program. Overall, the number of adult non-residential program admissions increased each of the five fiscal years, from a low of 26,021 admissions in the 2000-01 Fiscal Year to a high of 39,297 admissions in the 2004-05 Fiscal Year. The same pattern of annual increasing admissions was identified for adult outpatient counseling programs. This is not surprising given that outpatient counseling programs account for the majority (70.0% to 80.0%) of non-residential admissions each fiscal year.

The number of day care admissions decreased by 5.0% (1,514 to 1,440) in the 2001-02 Fiscal Year and increased by 25.0% in the 2002-03 Fiscal Year to 1,915 annual admissions. Over the last two fiscal years, day care program admissions were relatively constant, 1,977 and 1,961. The detoxification narcotic treatment program showed a 51.0% decrease in the number of reported admissions over the five fiscal years; a high of 3,165 admissions in the 2000-01 Fiscal Year to a low of 1,553 admissions in the 2004-05 Fiscal Year. The maintenance narcotic treatment program showed a decrease in the first three fiscal years, approximately a 28.0% decrease of reported program admissions each fiscal year. However, during the 2003-04 and 2004-05 fiscal years, narcotic maintenance treatment programs have reported significant increases in participant admissions, 61.0% and 33.0%, respectively.

Table 2.15 - Number of Adult Non-Residential Admissions
by Program Type and Fiscal Year

Fiscal Year	Non Residential Admissions				Total
	Day Care	Outpatient	NTP Detox	NTP Maint	
2000-01	1,514	17,884	3,165	3,458	26,021
2001-02	1,440	21,142	2,562	2,463	27,607
2002-03	1,915	23,260	2,305	1,794	29,274
2003-04	1,977	27,987	5,217	3,658	38,839
2004-05	1,961	31,949	1,553	3,834	39,297

Source: Los Angeles County Participant Reporting System

Table 2.16 shows adult admission trends over five fiscal years by the two residential program types and the overall adult residential program. The admissions to the overall adult residential program decreased by 8.0% over two fiscal years, 2001-02 and 2002-03; approximately 4.0% decrease each fiscal year. Conversely, over the last two fiscal years, reported adult residential program admissions have increased, a 4.0% increase in the 2003-04 Fiscal Year and a 3.0% increase in the 2004-05 Fiscal Year. The residential services program, the larger of the two types of residential programs, showed a steady decrease in reported admissions over the first three fiscal years, followed by a steady increase over the last two fiscal years. The detoxification residential program showed a steady increase in reported admissions each of the first four fiscal years, 2000-01 to 2003-04. A slight decrease (6.0%) in reported admissions was noted in the last fiscal year, 2004-05.

Table 2.16 - Number of Adult Residential Admissions
by Program Type and Fiscal Year

Fiscal Year	Residential Admissions		Total
	Detoxification	Residential	
2000-01	4,266	15,833	20,099
2001-02	4,317	14,937	19,254
2002-03	5,235	13,288	18,523

Outpatient Counseling Program Participant Primary Drug Problem Trends

According to Table 2.18, outpatient counseling program participants reported alcohol, cocaine/crack, or methamphetamine as their most likely primary drug problem each fiscal year. Over the last two fiscal years, 2003-04 and 2004-05, methamphetamine was the primary drug problem reported by most outpatient counseling program participants.

Table 2.18 – Adult Outpatient Counseling Program Participant Primary Drug Problem by Fiscal Year

NTP Detoxification and Maintenance Programs Participant Primary Drug Problem Trends

Narcotic treatment programs by design provide methadone/LAAM services to participants who have heroin or other morphine-like primary drug problems. As anticipated, each fiscal year almost all participants in NTPs reported heroin (91.8% to 98.0%) as their primary drug problem (Tables 2.19 and 2.20).

Table 2.19 – NTP Detoxification Program Participant Primary Drug Problem by Fiscal Year

Residential Detoxification Program Participant Primary Drug Problem Trends

Table 2.21 indicates that for the most part each fiscal year close to half of the residential detoxification program participants reported heroin use as their primary drug problem. Alcohol was the second prominent primary drug problem reported by program participants. Note that the number of participants reporting methamphetamine use as their primary drug problem has increased each fiscal year.

Table 2.21 – Adult Residential Detoxification Program Participant Primary Drug Problem by Fiscal Year

Residential Services Program Participant Primary Drug Problem Trends

Table 2.22 shows that throughout most of the five fiscal years, cocaine/crack was the primary drug problem for a third of the residential services program participants. Note that the percent of participants reporting methamphetamine as their primary drug problem nearly doubled from 17.0% in the 2000-01 Fiscal Year to 33.0% in the 2004-05 Fiscal Year. There have been marginal increases in marijuana being reported as the primary drug problem and decreases in heroin being reported as the primary problem. The number of residential services program participants reporting alcohol as their primary drug problem has decreased each fiscal year. Over the last two fiscal years, 1 out of every 5 residential services program participants reported alcohol use as their primary drug problem.

Table 2.22 – Adult Residential Services Program Participant Primary Drug Problem by Fiscal Year

Outpatient Counseling Program Participant Treatment Compliance Trends

Table 2.24 shows that the percentage of outpatient counseling program participants that were discharged from outpatient counseling programs with positive treatment compliance assessments decreased over the first four fiscal years; from a high of 49.8% in the 2000-01 Fiscal Year to a low of 38.9% in 2003-04. During the last fiscal year, 2004-05, there was a slight increase in the percent of discharges with positive treatment compliance.

Table 2.24 – Adult Outpatient Counseling Participant Treatment Compliance/Discharge Status by Fiscal Year

Chapter 3 – LAC Youth Services

Introduction

Traditional Alcohol and Drug Program Administration (ADPA) contracted residential and non-residential alcohol and drug programs provide services to target youth populations, individuals who are between 12 and 20 years of age with substance abuse problems. California Family Code (6929b) states that a minor who is 12 years or older may consent to medical care and counseling relating to the diagnosis and treatment of a drug or alcohol-related problem.

A total of 48 community-based agencies managed 76 treatment/recovery programs that provided youth services at 66 facility sites located throughout Los Angeles County. To maintain easy access to services, many of these agencies operated programs located at schools, parks, and recreational centers.

Youth services included the following three program types:

- Day Care Programs provide counseling and recovery services to persons who have drug and/or alcohol-related problems. The primary purpose of these services is to provide a planned treatment program in a social setting structured to maximize recovery and rehabilitation of participants. These program services are more intensive than a visit (person-to-person contact) but less extensive than 24-hour residential services.
- Outpatient Counseling Programs provide crisis intervention, counseling, and participant referral services to individuals affected by alcohol and/or drug-related problems. Services may include participant screening and assessment, development of treatment plans, individual and group counseling, hosting mutual self-help groups, coordination with other agencies, and referral to other resources. This program is designed to provide an alcohol and drug-free environment with structure and supervision to further a participant's ability to improve his/her level of functioning.
- Residential Services is a 24-hour live-in, drug-free treatment environment for persons with drug and/or alcohol-related problems. Participants are to be involved in no less than six hours of planned treatment activities per day under the supervision of trained staff. Services may include intake and participant screening, room and meals, crisis intervention, individual and group counseling, host mutual self-help group discussions, and social and recreational activities.

Admissions by Division and Program Type

Table 3.1 shows that a total of 6,582 admissions to youth services were reported during the 2004-05 Fiscal Year. The majority (63.3%) of admissions were to outpatient counseling services and approximately one-fourth (27.5%) of admissions were to day care programs. Less than 10.0% of the youth admissions were to residential services.

Table 3.1 - Admissions by Division and Program Type

Day Care Programs

Participant Demographics

During the 2004-05 Fiscal Year, 1,697 youth accounted for 1,813 admissions to day care programs; 110 of these participants had two or more admissions.

According to statistical findings:

- the majority (66.9%) were male;
- 72.2% were between 14 and 17 years of age;
- most of the day care youth participants were Latino (59.8%) or Black/African American (28.9%); and
- most youth in day care programs reported marijuana/hashish (57.9%) or alcohol (25.1%) as their primary drug problem.

Outpatient Counseling Programs

Participant Demographics

During the 2004-05 Fiscal Year, 3,794 participants accounted for 4,169 admissions to outpatient counseling programs; 344 of these participants had two or more admissions.

According to statistical findings:

- the majority (66.1%) were male;
- 95.1% were between 14 and 17 years of age;
- most of the outpatient youth participants were Latino (70.5%); and
- most youth in outpatient programs reported marijuana/hashish (53.9%) or alcohol (31.0%) as their primary drug problem.

Residential Services

Participant Demographics

During the 2004-05 Fiscal Year, 521 participants accounted for 600 admissions to residential services; 71 of these participants had two or more admissions. [Table 3.6]

According to statistical findings:

- the majority (70.6%) were male;
- 87.3% were between 14 and 17 years of age;
- most of the residential program youth were Latino (69.7%); and
- most residential treatment program youth reported either marijuana/hashish (50.9%) or methamphetamine (36.8%) as their primary drug problem.

Youth Services Program Trends

Admissions and Participants by Overall Youth Program and Program Types

Table 3.8 shows the number of program admissions over five fiscal years (2000-01 to 2004-05).

Between fiscal years 2000-01 to 2003-04, the total number of reported youth admissions increased 62.4%. During the 2004-05 Fiscal Year, the number of reported youth admissions decreased by 9.0%. Youth admissions to day care programs have increased each fiscal year.

During the four fiscal years, the number of annual youth admissions to outpatient counseling was significant. The 1,847 annual admissions reported in 2000-01 were almost tripled by the 5,374 youth admissions to outpatient counseling programs in 2003-04.

During the five fiscal years, residential admissions fluctuated no more than 150 admissions from year to year. Admissions decreased from 604 in 2000-01 to a low of 454 admissions in 2002-03 Fiscal Year. By the fifth fiscal year, 2004-05, the annual reported number of youth admitted to residential programs was again 600, essentially the same as the number reported in 2000-01.

Table 3.8 – Number of Youth Admissions by Program Type and Fiscal Year

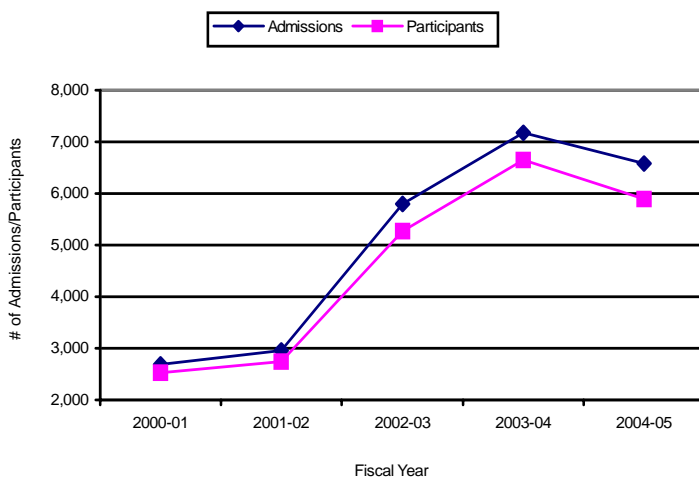

Fiscal Year	Day Care	Outpatient	Residential	Total
2000-01	243	1,847	604	2,694

2002-03	896	4,441	454	5,791
2003-04	1,322	5,374	475	7,171
2004-05	1,813	4,169	600	6,582

Source: Los Angeles County Participant Reporting System

Chapter 3

As seen in Figure 3.1, there was only a slight variance between the number of youth admissions and participants from 2000-01 to 2004-05 Fiscal Years. This indicates that most youth participants had only one admission for each fiscal year.

Figure 3.1 - Total Number of Youth Admissions and Participants by Fiscal Year

Day Care Program Participant Primary Drug Problem Trends

Table 3.9 shows the trends for primary drug problems reported by youth day care program participants over five fiscal years (2000-01 to 2004-05). The percentage of youth reporting alcohol as a primary drug problem increased from 2000-01 to 2002-03 (16.3% to 29.8%) then slightly declined in 2004-05 (25.1%). Approximately 6 out of 10 participants reported marijuana as their primary drug problem over the five fiscal years.

Table 3.9 – Youth Day Care Program Participant Primary Drug Problem by Fiscal Year

Chapter 3

Day Care Program Participant Treatment Compliance Trends

As shown in Table 3.10, the majority of youth day care program participants received a positive treatment compliance assessment at discharge for each of the five fiscal years. The five-year average was 57.6%.

Table 3.10 – Youth Day Care Program Participant Treatment Compliance/Discharge Status by Fiscal Year

Outpatient Counseling Program Participant Primary Drug Problem Trends

As shown in Table 3.11, the majority of youth outpatient counseling program participants reported marijuana as their primary drug problem. Although the percent of youth reporting marijuana as their primary drug problem declined for three of the five fiscal years, 53.9% of youth program participants in 2004-05 reported marijuana as their primary problem. Alcohol ranked as second most frequently reported primary drug problem. In 2000-01 and 2001-02, about 16.0% of youth identified alcohol as their primary problem. This percentage increased for each of the following three fiscal years (2002-03 to 2004-05), where approximately 30.0% of youth reported alcohol as their primary drug problem.

Table 3.11 – Youth Outpatient Counseling Program Participant Primary Drug Problem by Fiscal Year

Residential Services Program Participant Primary Drug Problem Trends

Marijuana and methamphetamine were the two most frequently reported primary drug problems for youth residential services' participants (Table 3.13). From 2000-01 to 2003-04, there was a downward trend (60.4% to 40.4%) in the percentage of youth who reported marijuana use. In 2004-05, half of the youth reported marijuana as their primary drug problem. There was a steady increase (17.7% to 38.3%) in the percentage of youth reporting methamphetamine use over the first four fiscal years. A slight decrease (36.9%) in methamphetamine use was seen in 2004-05.

Residential Services Program Participant Treatment Compliance Trends

The average youth residential services program participant treatment compliance was 41.4%. Positive treatment compliance fluctuated over the five fiscal years, ranging from a low of 32.5% in 2001-02 and a high of 51.3% in 2003-04.

Chapter 4 – LAC Adolescent Intervention, Treatment, and Recovery Program Services

Introduction

In November 2000, the Los Angeles County (LAC) Alcohol and Drug Program Administration (ADPA) implemented a special youth-focused program known as the Adolescent Intervention, Treatment, and Recovery Program (AITRP) to comply with a federal initiative to increase and improve alcohol and other drug services for youth. AITRPs provide a continuum of prevention, outpatient, and residential services for youth 12 to 21 years of age. This program consists of ADPA-contracted agencies that have specific expertise in providing culturally sensitive and developmentally appropriate services for youth. AITRPs also serve youth with co-occurring mental health problems and those youth involved with the juvenile and criminal justice systems. AITRPs work closely with the Juvenile Court, the Probation Department, schools, and other youth service organizations. During the 2004-05 Fiscal Year, 14 community-based agencies maintained 34 adolescent residential and outpatient programs in 30 facility sites located throughout Los Angeles County.

AITRPs provide the following two types of treatment/recovery services:

- Outpatient Counseling

This type of program provides alcohol and drug treatment/recovery services in a non-residential setting to adolescents. Services may include participant screening and assessment, development of treatment plans, individual, group and family counseling, crisis intervention, coordination with other agencies, and referral to other resources. This program is designed to provide an alcohol and drug-free environment with structure and supervision to further a participant's ability to improve his/her level of functioning.

- Residential Services

This type of program is a 24-hour live-in drug-free facility that provides treatment and specialized recovery services to adolescents with alcohol and/or other drug problems. Participants are to be involved in no less than six hours of planned treatment activities per day under the supervision of trained staff. Residential services may include intake and assessment, case management, individual and group counseling, peer support discussion groups, and after recovery support services.

Table 4.1 shows that during the 2004-05 Fiscal Year, 80.0% of adolescent admissions were to outpatient programs and 20.0% to residential programs. Please note that the number of admissions to outpatient and residential programs are based on allocated funds and is not a direct indication of adolescent treatment needs.

AITRP Outpatient Services

Participant Demographics

Table 4.2 shows that during the 2004-05 Fiscal Year, outpatient participants were mostly male (72.5%), Latino (71.7%), between the ages of 14 and 17 (79.9%), with 9 to 12 years of education (79.8%). Most were unemployed (69.9%) or not in the labor force (23.9%). The majority (65.0%) of outpatient adolescent program participants reported that marijuana use was their primary drug problem. Alcohol (15.0%) and methamphetamine (15.4%) were the other two primary drug problems most likely reported by adolescents.

Chapter 4

Participant Treatment Compliance

Table 4.3 shows that almost half (49.2%) of the outpatient participants were assessed as having had positive treatment compliance when they were discharged from the programs. These participants either completed their treatment plan (28.7%) or left the program before completing treatment with satisfactory progress (20.5%).

AITRP Residential Services

Participant Demographics

The majority of residential program adolescent participants were male (54.2%), between 14 and 17 years of age (82.2%), with 9 to 12 years of education (73.7%). Most adolescent residential program participants were either Latino (44.5%) or White (32.4%). The majority were unemployed (68.9%) or not in the labor force (30.7%). Methamphetamine (43.7%) and marijuana (42.3%) were the two most frequently reported primary drug problems.

Participant Treatment Compliance

Table 4.5 shows that 55.3%, 193 of the 349 discharges from adolescent residential programs in 2004-05 Fiscal Year were assessed as positive treatment compliance. These adolescent residential program participants either completed their treatment plan (33.8%) or left the program before completing treatment with satisfactory progress (21.5%).

AITRP Trends

Admission and Participants Trends

In the first fiscal year (eight months) of operation, AITRPs reported serving 649 participants who accounted for 656 admissions. Each fiscal year, the number of participants and admissions has increased with ADPA's ongoing effort to implement and maintain AITRPs and funding. Over five fiscal years, 2000-01 to 2004-05, the AITRP has an average fiscal year increase of 32.0% in admissions and 29.0% in participants.

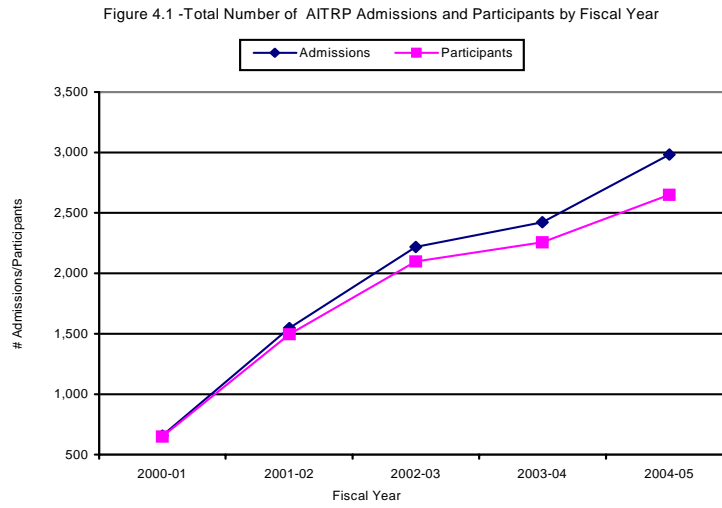

Table 4.6 – AITRP Admissions and Participants by Fiscal Year

Fiscal Year	Outpatient	Residential	Overall	
	Admissions	Admissions	Admissions	Participants

Chapter 4

Figure 4.1 illustrates the increases in admissions and participants over five fiscal years as more AITRP treatment slots became available.

AITRP Outpatient Program Participant Trends

Table 4.7 shows that over five fiscal years the majority of adolescent participants in outpatient programs, on the average, were male (72.5%), Latino (63.5%), between 14 and 17 years of age (78.8%), with 9 to 12 years of education (76.4%). Each fiscal year, approximately 1 out of 100 adolescent participants in outpatient programs were reported as homeless. A total of 62 homeless adolescents were admitted to AITRPs over the five fiscal years. Each fiscal year the number of adolescent program participants with reported mental illness problems increased, from 20 (3.4%) in the 2000-01 Fiscal Year to 144 (6.7%) in 2004-05 Fiscal Year.

Table 4.7 – AITRP Outpatient Program Participant Demographics by Fiscal Year

Table 4.8 shows that marijuana use is the predominant (68.0% yearly average) primary drug problem reported by adolescent outpatient program participants in Los Angeles County. The average age of first marijuana use by adolescent program participants was 13 years of age. This predominance of reported marijuana use by Los Angeles County adolescent program participants is consistent with findings from such national and local youth surveys as the Youth Risk Behavior Surveillance System Survey and California Health Kids Survey. Although not as prominently used as marijuana, methamphetamine use as a primary problem reported by adolescent participants has increased each fiscal year. Current reports and studies indicate that methamphetamine use is a major problem nationally, in most states, and certainly in Los Angeles County. Note that although the percent of adolescent methamphetamine users has increased over the five years, a comparable reported increase in methamphetamine use has not been indicated in local youth surveys.

Table 4.8 – AITRP Outpatient Program Participant Primary Drug Problem by Fiscal Year

Table 4.9 shows that over five fiscal years, the average adolescent outpatient program participant treatment compliance was 47.6%. During the last two fiscal years (2003-04 and 2004-05), nearly half of the adolescent participants were assessed as having had positive treatment compliance when they were discharged from outpatient programs. These participants either completed their treatment plan (28.0%) or left the program before completing treatment with satisfactory progress (21.0%).

AITRP Residential Program Participant Trends

Table 4.10 shows that over five fiscal years most adolescent participants in residential programs, on the average, were male (60.4%); Latino (50.8%) or White (32.9%); between 14 and 17 years of age (82.6%); with 9 to 12 years of education (66.1%). A total of 40 homeless adolescents were admitted to AITRPs over the five fiscal years. Over the last two fiscal years (2003-04 and 2004-05), almost 1 out of every 5 adolescent residential program participant was reported as having been diagnosed with mental illness.

Chapter 4

Table 4.11 shows that marijuana and methamphetamine are the two most reported primary drug problems by adolescent residential program participants. Approximately, 7 out of 10 residential program participants reported marijuana as their primary drug problem in the 2000-01 Fiscal Year. Four fiscal years later, in the 2004-05 Fiscal Year, 4 out of 10 program participants reported marijuana as their primary drug problem. During the same period, the percent of adolescent residential program participants reporting methamphetamine as their primary drug problem increased each fiscal year. By the 2004-05 Fiscal Year, methamphetamine use was the most reported primary drug problem.

Table 4.11 – AITRP Residential Program Participant Primary Drug Problem by Fiscal Year

AITRP Participant Statistics by Agency

- Table 4.13 lists each agency alphabetically, with its corresponding AITRP participants and admissions during 2004-05 Fiscal Year. As shown, a total of 2,671 adolescent participants accounted for 2,984 AITRP admissions.
- Tables 4.14 through 4.27 provide participant demographics for each of the 14 agencies. Three of the 14 agencies provided both non-residential and residential treatment services; 10 agencies deliver non-residential treatment services exclusively. One agency provided residential services only.
- Marijuana was the most frequently reported primary drug problem by both non-residential and residential adolescent agency participants. For agencies that provided both residential and non-residential programs, a higher percent of adolescents with a methamphetamine primary drug problem participated in the residential program as opposed to the non-residential program.

■ ■ Chapter 5 – LAC Alcohol and Drug Treatment Program Special Populations

Special populations described in this chapter include criminal justice defendants, homeless individuals, needle users, persons with co-occurring mental illness and substance abuse problems, pregnant and parenting women, and public assistance recipients. Trend statistics, which include admissions and participants, participant demographics, primary drug problem, and treatment outcomes, are provided for each special population.

During the 2004-05 Fiscal Year, the following special populations received alcohol and/or drug treatment/recovery services.

- ❖ California Work Opportunity and Responsibility to Kids' Recipients
- ❖ Co-Occurring (Mental Illness and Substance Abuse) Disorders
- ❖ Drug Court Defendants
- ❖ Female Offenders Project
- ❖ General Relief Recipients
- ❖ Homeless Individuals
- ❖ Needle Users
- ❖ Perinatal Services Network
- ❖ Pregnant Women
- ❖ Prison Parolee Network
- ❖ Proposition 36 Defendants

California Work Opportunity and Responsibility to Kids' Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

Under the federal Personal Responsibility and Work Opportunity Reconciliation Act of 1996, adults receiving cash assistance through Temporary Aid to Needy Families [(TANF), which replaced Aid to Families with Dependent Children (AFDC) program] have an 18 to 24 month limit on aid, during which time they have to engage in a set number of hours of work or work-related activity. There is a five-year lifetime limit on aid as well. When California adopted TANF, the State Legislature voted to rename California's welfare reform program California Work Opportunity and Responsibility to Kids (CalWORKs). Under the CalWORKs program, counties may provide additional supportive services to participants including mental health, domestic violence, and substance abuse treatment. These services are designed to remove potential barriers for participants trying to obtain and retain employment.

Participants are pre-screened by Department of Public Social Services staff during CalWORKs intake to determine if there is a possible substance abuse problem. Participants identified with a possible alcohol or other drug problems are referred to ADPA-contracted Community Assessment Services Centers (CASC) for a clinical assessment.

Participants identified with alcohol or other drug problems by CASC are encouraged to participate in a treatment and recovery program. ADPA's network of alcohol and other drug treatment/recovery programs provide services for CalWORKs recipients. Participation in these supportive services is considered a part of the welfare-to-work plan. The time spent in substance abuse treatment and recovery services normally satisfies the participant's weekly program requirement for work or job training and related activities.

CalWORKs Admissions and Participants Trends

Table 5.1 and Figure 5.1 show that CalWORKs admissions sharply declined (20.0%) from 2001-02 to 2002-03, remained constant in 2003-04 and then increased by 24.8%. The number of participants decreased and increased in a similar pattern as admissions.

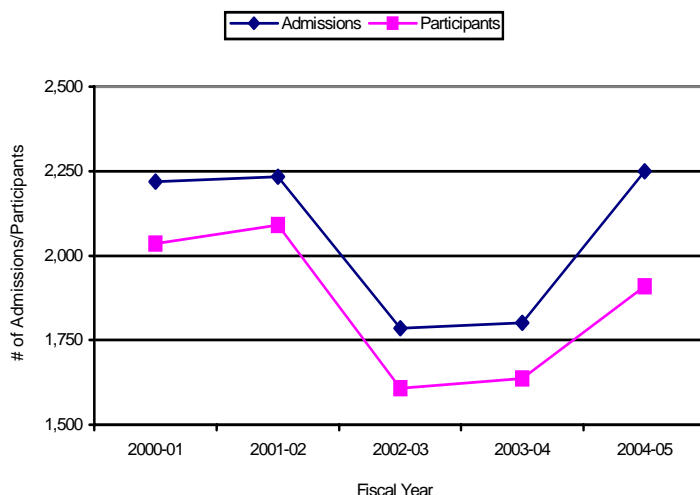

During the 2004-05 Fiscal Year, 1,910 participants accounted for the 2,249 CalWORKs' admissions; 266 (13.9%) of these participants had two or more admissions.

Table 5.1 - Total Number of CalWORKs Program Admissions and Participants by Fiscal Year

Fiscal Year	Treatment/Recovery Programs	
	Admissions	Participants
2000-01	2,219	2,035
2001-02	2,233	2,090
2002-03	1,785	1,608
2003-04	1,801	1,636

Figure 5.1 - Total Number of CalWORKs Admissions and Participants by Fiscal Year

CalWORKs Program Participant Admissions by Program Type

Table 5.2 shows the type of programs that provided alcohol and drug treatment/recovery services to CalWORKs’ participants over five fiscal years. From 2000-01 to 2004-05, outpatient counseling programs had the highest percent of admissions for CalWORKs’ participants. Approximately, 3 out of 10 CalWORKs’ participants were admitted to residential services each fiscal year. The five-year average for admissions to day care programs was 18.3%.

Chapter 5

CalWORKs Program Participant Demographic Trends

As shown in Table 5.3, the demographics for CalWORKs' participants remained relatively constant over five fiscal years. The majority of participants were female (73.2 to 84.7%), between 25 and 44 years of age (71.1 to 75.4%), completed 9 to 12 years of education (77.8 to 84.5%), and unemployed (81.7 to 94.8%). Most CalWORKs' participants were Black/African American (28.4 to 40.9%), Latino (29.9 to 39.9%), or White (22.8 to 24.9%). Over the first four fiscal years, 1 out of 5 CalWORKs participants reported being homeless at admission and 1 out of 4 were homeless in 2004-05.

Table 5.3 – CalWORKs Program Participant Demographics by Fiscal Year

CalWORKs Program Participant Primary Drug Problem Trends

According to Table 5.4, methamphetamine abuse not only came in first in 2004-05, but its prominence has grown annually from 17.8% in 2000-01 to 40.3% in 2004-05. In 2000-01 and 2001-02, cocaine/crack (30.2% and 31.5%, respectively) ranked as the number one primary drug problem for CalWORKs participants. Cocaine/crack use continued to decline over the next three fiscal years, from 27.4% to 19.9%. The percentage of CalWORKs participants reporting alcohol as their primary problem decreased over the five fiscal years (24.1% to 16.5%).

Table 5.4 - CalWORKs Program Participant Primary Drug Problem by Fiscal Year

CalWORKs Participant Treatment Compliance Trends

During the 2004-05 Fiscal Year, 53.2% of the CalWORKs participants were discharged with a positive treatment compliance status; they were successful in complying with their treatment plan. The five-year average for positive treatment compliance assessment was 49.3%.

Table 5.5 - CalWORKs Program Participant Treatment Compliance/Discharge Status by Fiscal Year

Co-Occurring (Mental Illness and Substance Abuse) Disorder Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

Individuals with co-occurring disorders have mental illness and substance abuse problems. Based on a Substance Abuse and Mental Health Services Administration (SAMHSA) study (1997), it is estimated that on any given year, approximately 10 million people in the United States have a substance abuse problem and at least one other mental illness. The 2001 Treatment Episode Data Set (TEDS) indicated that about 16.0% of all substance abuse admissions were for individuals with co-occurring disorders. This percentage is slightly lower for Los Angeles County. In Los Angeles County, 11.4% of the alcohol and drug admissions in 2001-02 Fiscal Year had chronic mental health problems or disabilities.

The following salient points regarding individuals with co-occurring disorders are based on national and local statistics:

Office of Applied Studies – The Drug and Alcohol Services Information System (DASIS) Report (April 9, 2004)

- In 2001, nationally, males accounted for 56.0% and females 44.0% of the admissions for individuals with co-occurring mental illness and substance abuse problems. In Los Angeles County, for 2001-02 Fiscal Year, about the same percentages were reported for males (53.6%) and females (46.4%).
- The DASIS Report (2001) shows that nationally Whites (74.0%) constituted the majority of admissions identified for individuals with co-occurring disorders, followed by Blacks (15.0%) and Latinos (7.0%). In Los Angeles County, however, Whites comprised only 43.5% of participants with co-occurring disorders in 2001-02, 31.2% Blacks and 20.0% Latinos.
- Nationally, alcohol was more likely to be the reported primary substance of abuse for admissions (45.0%) of individuals with co-occurring disorders. Opiates (21.0%), cocaine (11.0%), and marijuana (13.0%) were less likely to be the primary substances of abuse.

During the 2001-02 Fiscal Year, in Los Angeles County, participants reported similar percentages for alcohol (27.1%) and cocaine/crack (26.5%). During this same period, 18.6% reported heroin use. Methamphetamine (12.7%) and marijuana/hashish (8.3%) were less likely to be substances of abuse for participants identified with co-occurring disorders.

- In 2001, about 60.0% of national admissions for individuals with co-occurring disorders were to ambulatory/non-residential settings. Residential/rehabilitative settings accounted for 22.0% of the admissions and the remaining admissions were detoxification services (19.0%). In Los Angeles County, the majority (51.5%) of admissions for participants with co-occurring disorders were to a non-residential program, day care (6.1%), narcotic treatment maintenance (4.7%), and outpatient counseling (40.7%). One-third of the admissions were to a residential services' program. Among the detoxification admissions, 13.4% were for residential detoxification and only 1.4% to non-residential narcotic treatment detoxification services.

Co-Occurring (Mental Illness and Substance Abuse) Disorder Admissions and Participant Trends

For individuals with co-occurring disorders, there was a significant increase in the number of admissions and participants over five fiscal years (Table 5.6 and Figure 5.2). The number of admissions and participants more than doubled in 2004-05 Fiscal Year compared to 2000-01 Fiscal Year.

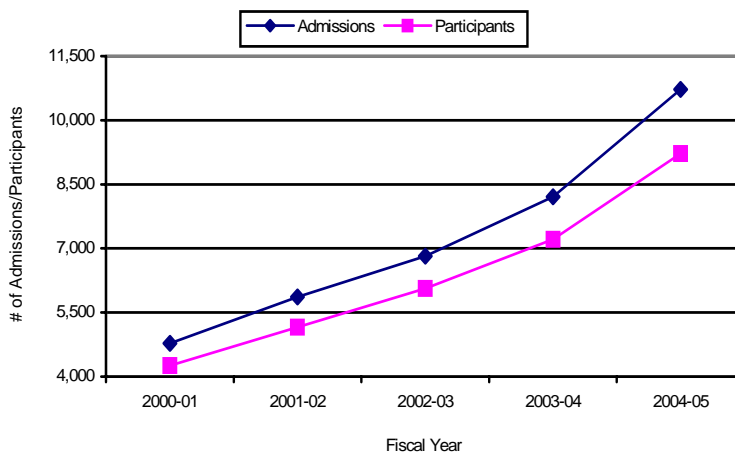

During the 2004-05 Fiscal Year, there were 9,223 participants which accounted for 10,720 admissions to alcohol and drug treatment programs; 2,271 (24.6%) of these participants had two or more admissions.

Table 5.6 - Total Number of Co-Occurring Disorder Program Admissions and Participants by Fiscal Year

Chapter 5

Co-Occurring (Mental Illness and Substance Abuse) Disorder Program Participant Admissions by Program Type

Table 5.7 shows that each fiscal year 38.4% to 47.1% of the participants with co-occurring disorders were admitted to either residential services or residential detoxification programs. Each of the last three fiscal years (2002-03 to 2004-05) about half of the participants identified with co-occurring disorders were admitted to outpatient counseling.

Table 5.7 – Co-Occurring Disorder Program Participant Admissions by Program Type and Fiscal Year

Co-Occurring (Mental Illness and Substance Abuse) Disorder Program Participant Demographic Trends

Table 5.8 shows that the demographics for participants with co-occurring disorders have remained stable over the five fiscal years (from 2000-01 to 2004-05). The majority of participants were male, between 25 and 44 years of age, unemployed, with 9 to 12 years of education. Most participants were White, Black/African American, or Latino. One out of 4 was reported as homeless.

Co-Occurring (Mental Illness and Substance Abuse) Disorder Program Participant Primary Drug Problem Trends

Over the five fiscal years, participants with co-occurring disorders reported alcohol, cocaine/crack, and methamphetamine as their primary drug problems. From 2000-01 to 2004-05, there was a twofold increase in methamphetamine abuse, stable patterns of abuse of alcohol (from 26.1% to 27.8%) and cocaine/crack (from 22.8% to 27.8%) and steady but marginal increase in marijuana use/abuse. Heroin abuse was 20.6% among participants with co-occurring disorders in 2000-01 but declined to 10.4% in 2004-05 Fiscal Year.

Table 5.9 – Co-Occurring Disorder Program Participant Primary Drug Problem by Fiscal Year

Co-Occurring (Mental Illness and Substance Abuse) Disorder Participant Treatment Compliance Trends

According to Table 5.10, for each of the five fiscal years more than half of the participants identified with co-occurring disorders were discharged with a positive treatment compliance status; they were successful in complying with their treatment plan.

Drug Court Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

Drug Court is a full or part-time court that has specifically been designated and staffed to supervise non-violent drug defendants who have been referred to a comprehensive and judicially monitored program of drug treatment and rehabilitation services. First established in Los Angeles in 1994, there are currently 13 operational adult Drug Court programs located throughout the County. The Drug Court Judge heads a non-adversarial team of court officers, defense and prosecution attorneys, and treatment counselors to support a participant's recovery through intensive supervision, drug treatment services, frequent drug testing, and court appearances.

The goals of drug court programs are to:

- reduce drug usage and recidivism;
- provide court supervised treatment; and
- offer the capability to integrate drug treatment with other rehabilitation services to promote long-term recovery and reduce social costs.

Drug Court Admissions and Participants Trends

Table 5.11 and Figure 5.3 show that the pattern of increase in program admissions and participants was briefly interrupted with a 20.2% and 18.2% drop, respectively, in 2002-03 Fiscal Year.

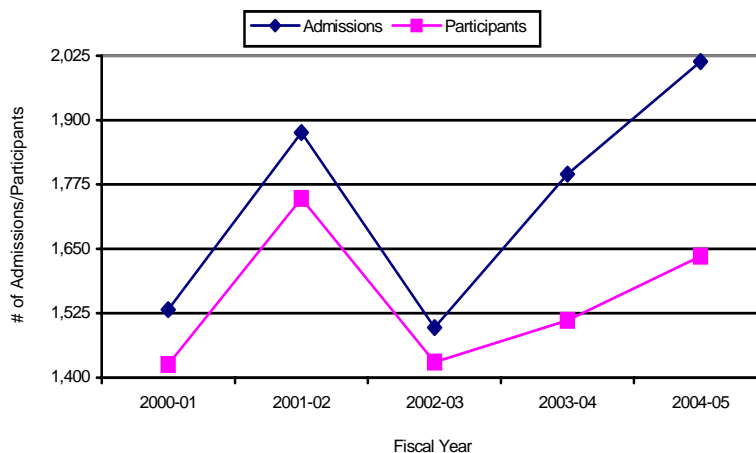

In 2004-05 Fiscal Year, 1,636 program participants accounted for 2,014 admissions; 295 (18.0%) of these participants had two or more admissions. The number of annual participants has ranged from 1,425 to 1,748. These admissions represent 3.0% of all admissions to County-funded alcohol and drug treatment programs.

Table 5.11 - Total Number of Drug Court Program Admissions and Participants by Fiscal Year

Chapter 5

Drug Court Program Participant Demographic Trends

Participant demographics have remained stable over five fiscal years. Below are the statistical findings for 2004-05 Fiscal Year:

- 71.6% were male
- 64.2% were between 25 and 44 years of age
- most drug court participants were Latino (45.8%), Black/African American (25.7%), or White (21.0%)
- 74.3% were unemployed
- 18.3% were homeless

Drug Court Program Participant Primary Drug Problem Trends

According to Table 5.14, methamphetamine came in second in 2004-05, but its prominence has grown annually from 21.2% in 2000-01 to 38.0% in 2004-05. Cocaine/crack (39.3%) was the most frequently reported primary drug problem; heroin (10.3%), marijuana/hashish (5.8%), and alcohol (4.4%) were other drugs of primary concern.

Table 5.14 – Drug Court Program Participant Primary Drug Problem by Fiscal Year

Drug Court Participant Treatment Compliance Trends

According to Table 5.15, in 2004-05 Fiscal Year, 70.9% of the drug court participants were discharged with a positive treatment compliance status; they were successful in complying with their treatment plan. The five-year average for positive treatment compliance assessment was 65.1%.

Table 5.15 – Drug Court Program Participant Treatment Compliance/Discharge Status by Fiscal Year

Female Offender Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

This project represents a joint effort by the California Department of Corrections, California Department of Alcohol and Drug Programs (ADP), and ADPA. The Female Offenders Treatment Program (FOTP) was first implemented during the 1992-93 Fiscal Year.

FOTP provides community residential alcohol and drug treatment and recovery services to women parolees in four counties – Los Angeles, Orange, Riverside, and San Bernardino. The program is administered jointly by ADP and the County Alcohol and Drug Services in each of the four counties. Primary referrals are female parolees graduated from the California Institute of Women (CIW) in-prison Forever Free Drug Program and women on community parole. Female inmates from the CIW in Frontera, who are paroled to Los Angeles County, voluntarily participate in community-based residential alcohol and drug treatment/recovery for up to six months.

The program objectives are:

- Provide up to six months of residential drug treatment services to each parolee who has graduated from the CIW in-prison Forever Free Drug Program and women on community parole.
- Improve female parolee outcomes evidenced by fewer drug-related revocations and related criminal violations.
- Reduce State General Fund costs for incarceration and parole supervision.

Female Offender Admissions and Participants Trends

Figure 5.16 and Figure 5.4 show that since 2000-01, the number of admissions steadily increased with only a slight dip in 2003-04. Over the five fiscal years, admissions increased by 56.0%. The number of participants followed a similar pattern and increased by 43.0%.

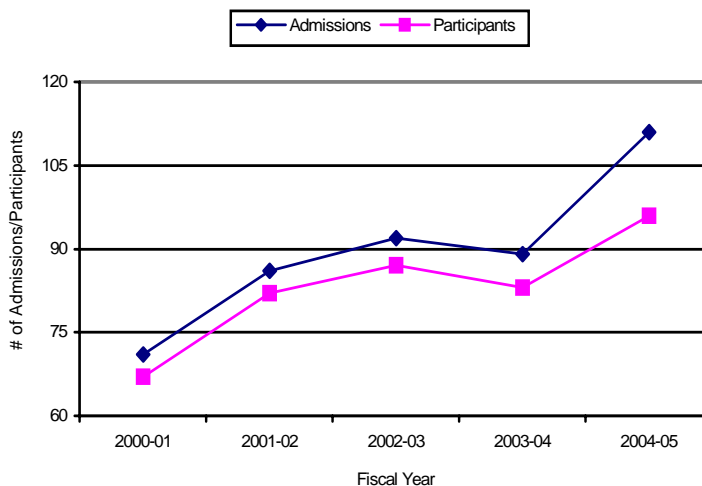

During the 2004-05 Fiscal Year, 96 participants accounted for 111 admissions; 13 (13.5%) of these participants had two or more admissions.

Table 5.16 - Total Number of Female Offender Program Admissions and Participants by Fiscal Year

Fiscal Year	Treatment/Recovery Programs	
	Admissions	Participants
2000-01	71	67
2001-02	86	82
2002-03	92	87
2003-04	89	83
2004-05	111	96

Figure 5.4- Total Number of Female Offender Admissions and Participants by Fiscal Year

Female Offender Program Participant Admissions by Program Type

As shown in Table 5.17, the only program type funded for female offenders is residential services. The residential setting offers a more structured drug-free environment to assist with the parolees' transition back into the community. Over the five fiscal years, admissions have increased from 71 in 2000-01 to 111 in 2004-05.

Table 5.17 – Female Offender Program Participants Admissions by Program Type and Fiscal Year

Program Type	2000-01		2001-02		2002-03		2003-04		2004-05

Residential Services	71	100.0	86	100.0	92	100.0	89	100.0	111	100.0

Source: Los Angeles County Participant Reporting System

Female Offender Program Participant Demographic Trends

As shown in Table 5.18, over the five fiscal years, the majority of female offenders were between 25 and 44 years of age (72.3 to 80.5%), completed 9 to 12 years of education (63.4 to 83.1%) and were homeless (52.2 to 62.2%). Blacks/African Americans (43.8 to 61.0%) constituted the largest race/ethnic group, followed by Whites (23.9 to 33.3%) and Latinos (9.0 to 22.9%).

Female Offender Program Participant Primary Drug Problem Trends

Table 5.19 shows that cocaine/crack remained the most prominent primary drug problem for female offenders during the five fiscal years (2000-01 to 2004-05). In 2000-01 and 2001-02, 7 out of 10 female offenders reported cocaine/crack use compared to 5 out of 10 for the three remaining fiscal years. In 2004-05 Fiscal Year, methamphetamine was the second most frequently reported drug problem. Methamphetamine use increased from 4.9% in 2001-02 to 28.1% in 2004-05. From 2000-01 to 2001-02, the percent reporting marijuana/hashish use doubled (10.5% to 20.7%), then dropped to 16.1% in 2002-03 and then remained stable for the two remaining fiscal years.

Table 5.19 – Female Offender Program Participant Primary Drug Problem by Fiscal Year

Female Offender Participant Treatment Compliance Trends

According to Table 5.20, during the 2004-05 Fiscal Year, 61.0% of the female offender participants were discharged with a positive treatment compliance status; they were successful in complying with their treatment plan. The five-year average for positive treatment compliance was 54.7%.

Table 5.20 – Female Offender Program Participant Treatment Compliance/Discharge Status by Fiscal Year

General Relief Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

Existing State law (California Welfare and Institutions Code section 17000 et.seq) requires counties to maintain a general assistance program for indigent persons. Indigent persons are defined as adults, 18 years of age and older, who have no source of income or means of providing for their basic needs such as food, shelter, and clothing. In Los Angeles County, this program is known as General Relief. Effective November 1997, all adult applicants applying for General Relief are required, as a condition for eligibility, to be screened during their intake interview to determine if there is a reasonable suspicion that he or she may have a substance abuse problem. These individuals are referred to an ADPA-contracted Community Assessment Services Center (CASC) for a professional evaluation, and, if appropriate, for urinalysis screening. Participants assessed and identified with alcohol or other drug problems are required to participate in a substance abuse treatment/recovery program in order to continue to receive General Relief benefits.

General Relief Admissions and Participants Trends

As seen in Table 5.21 and Figure 5.5, there was a downward trend in admissions for general relief recipients from 2000-01 to 2002-03 (38.9%), a spike in 2003-04 (55.2%), followed by a drop in 2004-05 (22.6%). The number of participants has varied over the last five fiscal years, ranging from 3,453 to 5,333. Over the five fiscal years, both admissions and participants decreased by 27.0%.

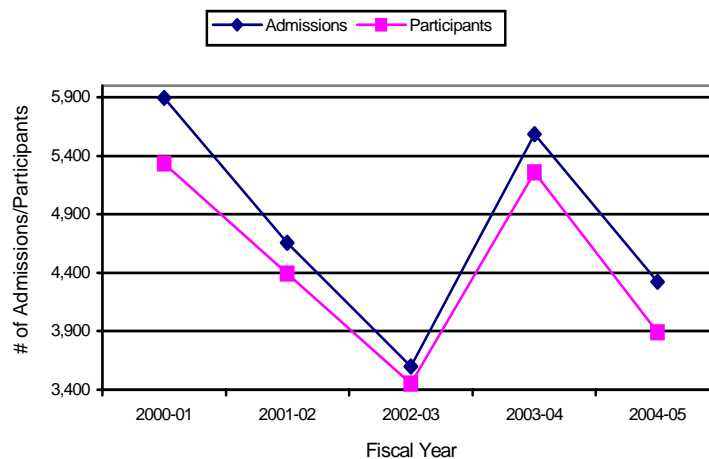

During the 2004-05 Fiscal Year, 3,888 participants accounted for 4,321 admissions; 381 (9.8%) of these participants had two or more admissions.

Table 5.21- Total Number of General Relief Program Admissions and Participants by Fiscal Year

Fiscal Year	Treatment/Recovery Programs	
	Admissions	Participants
2000-01	5,893	5,333
2001-02	4,658	4,396
2002-03	3,597	3,453
2003-04	5,584	5,260

General Relief Program Participant Demographic Trends

Table 5.23 shows the demographics for general relief participants over five fiscal years (2000-01 to 2004-05). The majority of participants were male (64.7 to 71.5%), between 25 and 44 years of age (58.5 to 62.9%), completed 9 to 12 years of education (77.4 to 81.0%), and unemployed (87.7 to 96.8%). General relief participants were Latino (28.0 to 40.2%), Black/African-American (28.8 to 44.8%), or White (22.4% to 25.1%). From 2000-01 to 2003-04, 3 out of every 10 participants reported being homeless and 4 out of 10 were homeless in 2004-05.

General Relief Program Participant Primary Drug Problem Trends

Table 5.24 shows the primary drug problem reported by general relief programs for a five-year period (2000-01 to 2004-05). In 2000-01, alcohol (35.9%), cocaine/crack (26.2%), and heroin (15.5%) were the most frequently reported drug problems for general relief participants. Over the five fiscal years, there has been a gradual downward trend for alcohol use. However, for each fiscal year, alcohol was the most frequently reported substance of abuse for general relief participants. Since 2000-01, methamphetamine use has grown annually from 11.4% to 25.1%. In 2003-04 and 2004-05, methamphetamine use ranked as the second most prominent drug problem. Cocaine/crack use has fallen from 26.2% in 2000-01 to 21.1% in 2004-05.

Table 5.24 – General Relief Program Participant Primary Drug Problem by Fiscal Year

General Relief Participant Treatment Compliance Trends

In 2004-05, almost half (48.3%) of the General Relief participants were discharged with a positive treatment compliance status; they were successful in complying with their treatment plan. The five-year average for positive treatment compliance was 45.3%.

Homeless Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

According to an analysis of U.S. Department of Housing and Urban Development numbers performed by USA Today (2005), California (195,637) reported the largest homeless population for any state and Los Angeles County (88,345) reported the largest homeless population for any county. In fact, if Los Angeles County's reported homeless population was reviewed against states, it would be ranked as the third largest reported homeless population behind the states of California and Florida.

A total of 49,611 homeless participants have been admitted to ADPA-funded alcohol and drug treatment programs over the last five fiscal years, 2000-01 to 2004-05. During the 2004-05 Fiscal Year, homeless participants were served in 294 of 374 (80.0%) of the ADPA-contracted alcohol and drug treatment programs. They received such services as crisis intervention, screening and assessment, treatment plans, individual and group counseling, and referrals.

The following salient points regarding homeless program participants are based on national and local statistical findings.

- Nationally, according to The Drug and Alcohol Services Information System (DASIS) Report (2006) prepared by the Office of Applied Studies, homeless participants comprised 13.0% of all admissions to public-funded substance abuse treatment facilities in 2004. Over each of the last five fiscal years, homeless participants in Los Angeles County comprised from 17.7 to 22.9% of all admissions to ADPA-contracted alcohol and drug treatment admissions.
- The DASIS Report shows that nationally the majority (77.0%) of homeless admissions are to residential detoxification (56.0%) and residential services (21.0%). Similarly, in Los Angeles County the majority (74.1 to 76.3%) of homeless participants were admitted to either residential service or residential detoxification programs.
- Nationally and locally, homeless admissions to treatment were older than those who were not homeless. According to the DASIS Report, nationally the average age of the homeless alcohol and drug admissions was 39. In Los Angeles County, the average age for homeless program participants over the last five fiscal years was 37.6.
- Nationally, 78.0% of homeless participants were male, a larger proportion than the 64.8% of Los Angeles County homeless that were males.
- Nationally, alcohol was the primary substance of abuse for more than half (52.0%) of homeless program admissions. In Los Angeles County, alcohol use was the most prominent (34.1%) primary drug problem during the 2000-01 Fiscal Year. By 2004-05, alcohol was the third most prominent drug problem following cocaine/crack and methamphetamine.
- According to SAMHSA's Treatment Episode Data Set (TEDS), in 2004 females comprised 22.0% of the reported homeless admissions nationally. Around the same time period in Los Angeles County, females comprised 35.2% of the homeless participants admitted to ADPA-contracted alcohol and drug programs. The percent of female participants who were homeless in Los Angeles County was 13.2% higher than what was reported nationally. Note that in Los Angeles County over each of the last five fiscal years, 35.2 to 37.6% of the homeless program participants were female.

Chapter 5

Homeless Admissions and Participant Trends

Table 5.1 and Figure 5.1 show that in the last four fiscal years the numbers of homeless program admissions and participants have steadily increased.

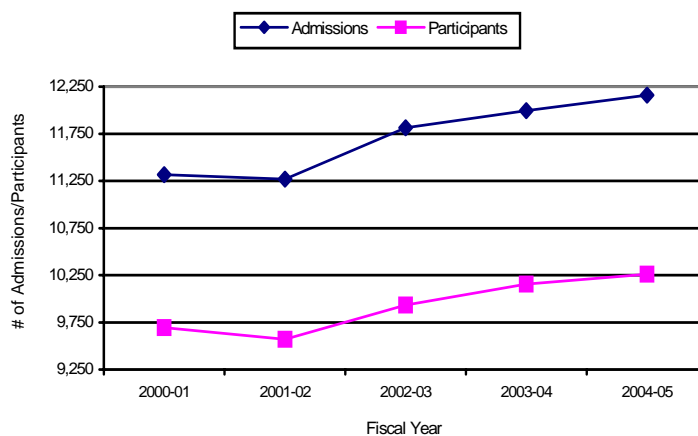

During the 2004-05 Fiscal Year, 10,260 participants accounted for 12,160 admissions to alcohol and drug treatment programs: 1,535 (15.0%) of these participants had two or more admissions.

Table 5.26 - Total Number of Homeless Program Admissions and Participants by Fiscal Year

Fiscal Year	Treatment/Recovery Programs	
	Admissions	Participants
2000-01	11,316	9,694

Chapter 5

Homeless Program Participant Admissions by Program Type

Table 5.27 shows that each fiscal year, the majority (74.1-76.3%) of homeless participants were admitted to either residential services or residential detoxification programs. Approximately, 20.0% or 1 out of 5 homeless participants were admitted to outpatient counseling programs each fiscal year.

Homeless Program Participant Demographic Trends

According to Table 5.28, over the last five years, most of the homeless participants were male (62.4 to 64.8%), between 25 and 44 years of age (60.5 to 68.3%), unemployed (85.6 to 98.1%), and most were White (33.4 to 35.0%), Black/African American (30.6 to 39.6%), or Latino (21.8 to 28.4%). During the first three of the five fiscal year period, programs reported that 12.1% to 16.2% of the homeless participants had mental health concerns. During the 2003-04 Fiscal Year, 27.1% of homeless program participants had mental health concerns. This percentage dropped to 21.9% in 2004-05.

Homeless Program Participant Primary Drug Problem Trends

In the 2000-01 Fiscal Year, alcohol (34.1%), cocaine/crack (31.2%), and heroin (17.2%) use were the most prominently reported primary drug problems by homeless program participants (Table 5.29). Five fiscal years later, in 2004-05, cocaine/crack (27.6%), methamphetamine (26.9%), and alcohol (20.6%) use were the most prominent primary drug problems reported by homeless alcohol and drug program participants. Note that the prominence of methamphetamine use has grown annually from 11.4% in 2000-01 Fiscal Year to 26.9% in 2004-05. Although heroin use in the last three fiscal years has fallen in overall prominence, 1 out of every 6 homeless program participants continued to report heroin use as their primary drug problem each fiscal year.

Table 5.29 - Homeless Program Participant Primary Drug Problem by Fiscal Year

Needle User Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

Needle users carry an increased risk of blood-borne infections, including HIV/AIDS and Hepatitis C, through the sharing of syringes and other injection paraphernalia. Based on a 2003 Drug and Alcohol Services Information System (DASIS) Report by Substance Abuse and Mental Health Services Administration (SAMHSA) Office of Applied Studies, there were 237,000 admissions reported to the Treatment Episode Data Set (TEDS) for which the primary drug of abuse was injected (13.0% of all admissions).

Salient findings from national and local sources on needle user program admissions and participants are as follows:

- These 237,000 admissions represent 11.1% of all public-funded substance abuse treatment facilities nationwide. Los Angeles County needle user program admissions comprised from 17.5% to 29.5% of all admissions to ADPA-funded alcohol and drug treatment programs.
- Heroin and other opiates accounted for 77.0% of all national admissions involving injection drug use. The other most commonly reported injected drugs were stimulants (16.0%) and cocaine (6.0%). Similarly, Los Angeles County alcohol and drug programs reported heroin as the primary drug problem of three-fourths of needle user program participants. The proportion of local methamphetamine use among these participants has doubled over five fiscal years.
- National admissions involving injection drug users (IDU) were predominantly among Whites (64.9%), followed by Latinos (18.6%) and Blacks/African Americans (12.2%). Similar patterns may be discerned in Los Angeles County IDU admissions although the racial/ethnic breakdown differs: White (42.6%), Latino (38.4%), and Black/African American (12.5%).

Needle User Program Admissions and Participant Trends

Table 5.31 and Figure 5.7 show that during the last five fiscal years, the number of admissions fluctuated: the 14,595 admissions seen in 2000-01 Fiscal Year dropped by 19.1% in 2002-03, then increased by 35.9% the next fiscal year and, again, dropped by 25.1% in 2004-05 Fiscal Year. The same pattern of fluctuations occurred in the number of program participants during the same time period.

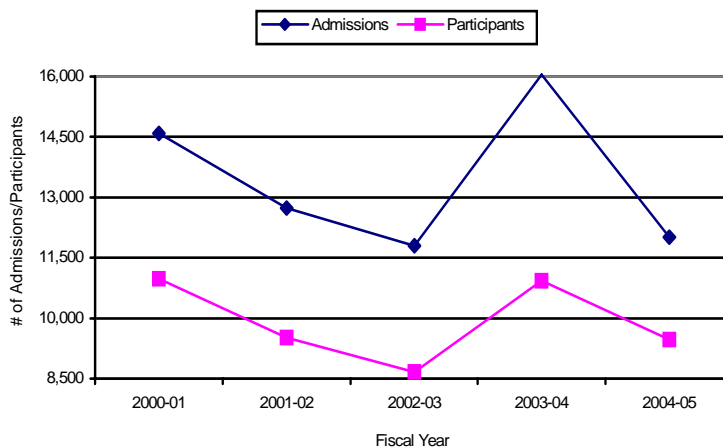

During the 2004-05 Fiscal Year, 9,473 participants accounted for 12,014 admissions; 1,769 (18.7%) of these participants had two or more admissions.

Table 5.31 - Total Number of Needle User Program Admissions and Participants by Fiscal Year

Figure 5.7- Total Number of Needle User Admissions and Participants by Fiscal Year

Needle User Program Admissions by Program Type

Table 5.32 describes the patterns of utilization of alcohol and drug program services by needle users during five fiscal years. About 40.0% of needle users each fiscal year were admitted to either residential detoxification or residential services programs. In 2004-05 Fiscal Year, more than a quarter (3,175) of total needle user admissions participated in NTP maintenance. One interesting development is the drop by 72.0% in the number of NTP detoxification admissions from 4,525 in 2003-04 Fiscal Year to 1,265 in 2004-05 Fiscal Year. In 2004-05 Fiscal Year, admissions in outpatient counseling programs represent 20.4% of all needle user admissions.

Chapter 5

Needle User Program Participant Demographic Trends

There were no noteworthy differences in the demographic characteristics of needle user admissions over five fiscal years by gender, race/ethnicity, age, education, employment, and homeless status.

According to 2004-05 statistical findings on needle user program participants:

- 67.3% were male
- 52.7% were between 25 and 44 years of age
- most were White (42.6%), Latino (38.4%), or Black/African American (12.5%)
- 77.0% were unemployed
- 23.2% were homeless

Needle User Program Participant Primary Drug Problem Trends

For five fiscal years, beginning in 2000-01, heroin was the primary drug problem for three-fourths of needle users. Alcohol, cocaine/crack, marijuana/hashish, and other drug use had remained marginal and stable throughout this period as the primary drug problem among needle users. Of interest is the twofold increase in needle user with methamphetamine as their primary drug from 2000-01 to 2004-05.

Table 5.34 – Needle User Program Participant Primary Drug Problem by Fiscal Year

Perinatal Services Network Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

The Office of Perinatal Substance Abuse oversees a statewide network of approximately 300 public-funded perinatal alcohol and other drug treatment programs that annually serve over 38,000 pregnant and parenting women, plus their children. In the Los Angeles County, during the 2004-05 Fiscal Year, ADPA contracted with 31 community-based agencies that provide 57 perinatal programs which served 1,263 women. The Perinatal Services Network provides programs that empower women to achieve and maintain clean and sober living, deliver healthy infants, strengthen family units, and lead productive lives. Perinatal services are designed to be gender specific and culturally relevant. Treatment and recovery options include: long-term residential treatment, day care habilitative services, outpatient counseling, narcotic replacement therapy, case management services, transitional housing, and sober living services.

Perinatal Admissions and Participants Trends

As seen in Table 5.36 and Figure 5.8, during the first four fiscal years (2000-01 to 2003-04), the number of participants admitted to perinatal programs has more than doubled (642 to 1,443). In the 2004-05 Fiscal Year, perinatal admissions declined 12.4%. The number of participants followed the same pattern as admission, ranging from 553 in 2000-01 to 1,159 in 2004-05.

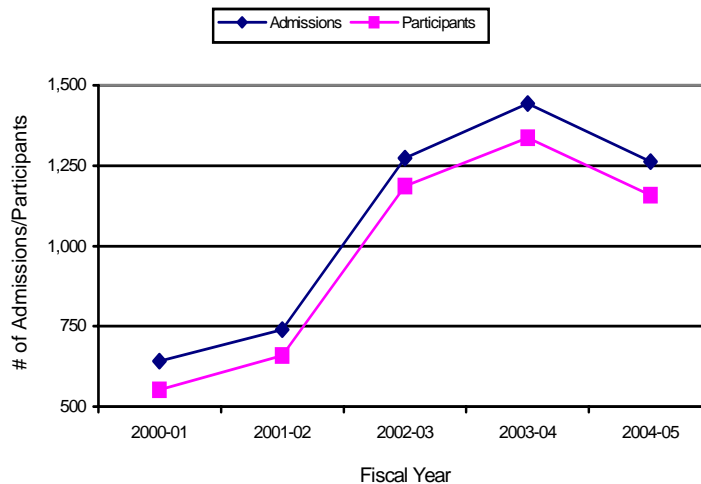

During the 2004-05 Fiscal Year, 1,159 participants accounted for 1,263 admissions; 95 (8.2%) of these participants had two or more admissions.

Table 5.36 - Total Number of Perinatal Program Admissions and Participants by Fiscal Year

Fiscal Year	Treatment/Recovery Programs	
	Admissions	Participants
2000-01	642	553
2001-02	740	660

Figure 5.8 - Total Number of Perinatal Admissions and Participants by Fiscal Year

Perinatal Program Participant Admissions by Program Type

Table 5.37 shows that each fiscal year, the majority (56.4 to 66.5%) of perinatal services were provided in day care program facilities. Day care services are non-residential programs which provide counseling and rehabilitation services. These programs are more intensive than a visit and are available a minimum of six hours per day, six days per week. Program participants must attend scheduled, formalized services at least three hours per day, three times per week.

Approximately, 20.0% or 1 out of 5 perinatal program participants were admitted to outpatient counseling programs each year. Approximately 15.0% were provided treatment in residential service programs. Less than 2.0% of the perinatal participants were admitted four out of the five fiscal years to residential detoxification, narcotic treatment detoxification, or narcotic treatment maintenance programs.

Chapter 5

Perinatal Program Participant Demographic Trends

According to Table 5.38, over the last three fiscal years, approximately 20.0% of the perinatal program participants were homeless, and 70.0% were between 25 and 44 years of age. Most participants were Latino, Black/African American, or White; reported 9 to 12 years of education; and unemployed.

Perinatal Program Participant Primary Drug Problem Trends

According to Table 5.39, either cocaine/crack or methamphetamine was the most prominent primary drug problem reported by perinatal program participants each fiscal year. Cocaine/crack used has decline each of the five fiscal years, from 42.0% in 2000-01 to 24.7% in 2004-05 Fiscal Year. Inversely, the prominence of methamphetamine use has increased four of five years from 21.3% in 2000-01 to 41.9% in 2004-05. Methamphetamine use was the most prominent primary drug problem in 2004-05. Alcohol use continued to be a primary drug problem for 11.5% to 17.0% of the women in perinatal programs each fiscal year. Marijuana was similar to alcohol in reported use each fiscal year.

Table 5.39 – Perinatal Program Participant Primary Drug Problem by Fiscal Year

Perinatal Participant Treatment Compliance Trends

According to Table 5.40, approximately 40.0 to 49.0% of the perinatal participants were discharged with a positive treatment compliance status; they were successful in complying with their treatment plan.

Table 5.40 – Perinatal Program Participant Treatment Compliance/Discharge Status by Fiscal Year

Pregnant Women Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

Substance use during pregnancy continues to be an ongoing concern because of the risks that illicit drugs, alcohol, and tobacco use pose to the mother, siblings, and unborn children.

The following are noteworthy findings based on comparisons between national and local statistics regarding pregnant women who participated in public-funded substance abuse programs.

Office of Applied Studies – The Drug and Alcohol Services Information System Report (September 3, 2006)

- During 2002, nationally, of the 363,000 women of childbearing age (15 to 44 years old) admitted to substance abuse treatment programs, 15,300 (4.0%) were pregnant. During the 2002-03 Fiscal Year, in Los Angeles County, 919 (5.9%) of the 15,569 women program participants of childbearing age were pregnant at program admission.
- Nationally, most pregnant women entering treatment during 2002 reported cocaine/crack (22.0%), amphetamine/methamphetamine (21.0%), alcohol (18.0%), marijuana (17.0%), or heroin (15.0%) as their primary substance of abuse. Locally in Los Angeles County, during the 2002-03 Fiscal Year, most pregnant women reported methamphetamine (31.2%), cocaine/crack (27.1%), marijuana (14.5%), alcohol (14.3%), or heroin (8.4%) as their primary substance of abuse. The percentage of pregnant women reporting methamphetamine as their primary substance of abuse was considerably higher in Los Angeles County (31.0%) than nationally (21.0%). Over each of the last five fiscal years, methamphetamine and cocaine/crack have been the top two primary substances of abuse by pregnant women in Los Angeles County ADPA-contracted treatment programs.
- Nationally, the majority (53.0%) of pregnant women entering treatment were between 20 and 29 years of age. In Los Angeles County, over each of the last five fiscal years, 39.5 to 52.3% of pregnant women were in this age range, 20 to 29 years of age.

National Survey on Drug Use and Health Report (January 2, 2004)

- Nationally, among pregnant women aged 15 to 44, approximately 6.0% Blacks, 4.0% Whites, and 2.0% Hispanics used illicit drugs in the past month. In Los Angeles County (2004-05 Fiscal Year), of the 585 pregnant women (15 to 44 years of age), who reported using illicit drugs in the past month, 27.5% were Blacks, 28.0% were Whites, and 39.0% were Hispanics.
- Nationally, 4.3% of pregnant women age 15 to 44 reported using an illicit drug during the past month. In Los Angeles County, over half (52.8%) of the pregnant women (15 to 44 years of age) at program admission reported they had used an illicit drug in the past month.
- Nationally, among pregnant women in the 15 to 44 age group, 9.8% reported drinking alcohol during the past month. In Los Angeles County, 12.0% of pregnant women at program admission reported drinking alcohol in the past month.

Pregnant Admissions and Participant Trends

Table 5.41 and Figure 5.9 show that the number of admissions and participants for pregnant women increased by 25.0% over the five fiscal years (2000-01 to 2004-05). Over the five fiscal years, the number of yearly pregnant participants has grown from 815 to 1,016.

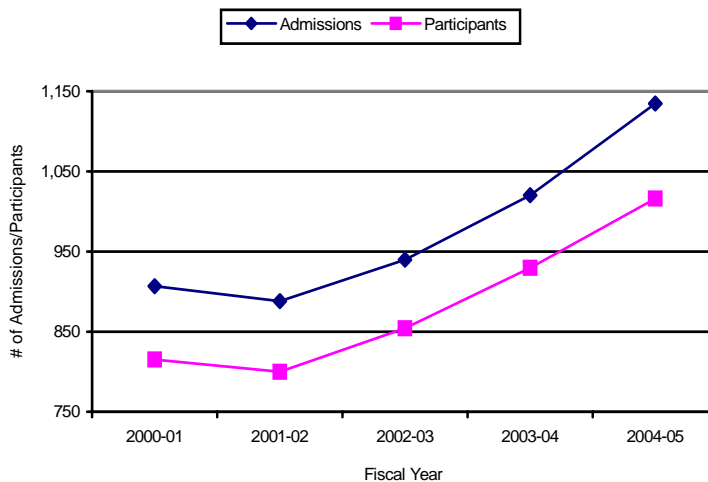

During the 2004-05 Fiscal Year, 1,016 participants accounted for 1,135 admissions; 110 (9.7%) of these participants had two or more admissions.

Chapter 5

Pregnant Program Participant Admissions by Program Type

Most pregnant women received services from an outpatient counseling program; the five-year average was 41.1%. Each fiscal year, approximately 30.0% of pregnant women were admitted to a residential services' program. With the exception of 2001-02 Fiscal Year, day care services were rendered to 1 of 5 pregnant women.

Pregnant Program Participant Demographic Trends

Table 5.43 shows the participant demographics for pregnant women over five fiscal years (2000-01 to 2004-05). The majority of pregnant women completed 9 to 12 years of education (76.5 to 82.0%) and reported being unemployed (81.4 to 92.9%). For each fiscal year, approximately one-fourth of pregnant women were White. While the percent of Black/African Americans who were pregnant has decreased from 37.8% in 2000-01 to 26.3% in 2004-05, Hispanic pregnant women have increased (32.8 to 42.3%). For age, the majority of pregnant women were between 25 and 44 years of age (59.5 to 72.0%). There was an increase in the percentage of pregnant women under 18 years of age each fiscal year; 2.7% in 2000-01 to 7.3% in 2004-05. Homelessness reported by pregnant women increased from 2000-01 to 2002-03 (25.5 to 32.0%) then dropped in 2003-04 and 2004-05 (26.0 and 23.3%, respectively).

Pregnant Program Participant Primary Drug Problem Trends

The five-year primary drug trends show that methamphetamine use among pregnant women has steadily increased, 23.1% in 2000-01 to 42.3% in 2004-05. Methamphetamine was the most frequently reported primary drug problem in 2004-05. There has been a downward trend in pregnant women reporting cocaine/crack use over the five fiscal years. In 2000-01, one-third (33.3%) of pregnant women reported cocaine/crack use compared to one-fifth (21.6%) in 2004-05. Over the five-year period, there was a decline in the use of heroin by pregnant women (13.3% to 7.5%). Marijuana/hashish use remained fairly constant over the five-year period, ranging from 11.2% in 2000-01 to 15.9% in 2004-05.

Pregnant Participant Treatment Compliance Trends

According to Table 5.45, positive treatment compliance for pregnant participants remained constant over the five fiscal years; averaging 48.6%. In 2004-05 Fiscal Year, half (50.7%) of the pregnant participants has a positive treatment compliance status; they were successful in complying with their treatment plan.

Prison Parolee Services Network Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

The Prison Parolee Network (PPN) is the result of a collaborative effort of the California Department of Corrections, California Department of Alcohol and Drug Programs, and ADPA. Male and female offenders, paroled to Los Angeles County, voluntarily participate in an ADPA-contracted alcohol and drug treatment/recovery program for up to six months. Treatment includes residential, outpatient, and alcohol/drug-free living center services.

PPN's program objectives are:

- to place parolees in appropriate alcohol and other drug treatment and recovery programs either from the community parole systems or immediately upon release from prison custody;
- improve parole outcomes as evidenced by fewer drug-related revocations and related criminal violations, and to reintegrate parolees into society and encourage a clean and sober lifestyle; and
- reduce State General Fund costs for incarceration and parole supervision.

PPN Admissions and Participants Trends

Table 5.46 and Figure 5.10 show that from 2000-01 to 2001-02 there was a sharp increase in admissions (43.5%) followed by a constant increase for the remaining fiscal years. Over the five fiscal years (2000-01 to 2004-05) admissions increased by 57.2% and participants increased by 52.4%.

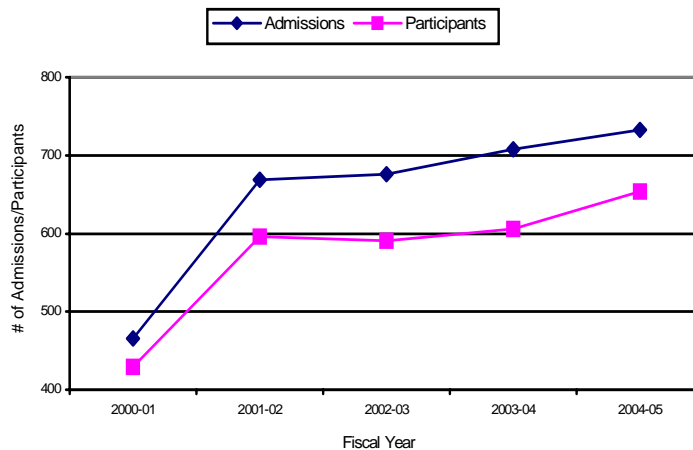

During the 2004-05 Fiscal Year, 654 participants accounted for 733 admissions; 76 (11.6%) of these participants had two or more admissions.

Table 5.46 - Total Number of PPN Program Admissions and Participants by Fiscal Year

Chapter 5

PPN Program Participant Demographic Trends

As shown in Table 5.48, the majority of PPN participants were male (78.5 to 89.3%), between 25 and 44 years of age (70.2 to 75.3%), completed 9 to 12 years of education (78.5 to 86.5%), and unemployed (70.3 to 89.4%). Most participants were Latino (37.9 to 21.9%), Black/African American (48.7 to 33.5%), or White (22.8 to 27.2%). For each of the five fiscal years, the percentage of PPN participants who reported being homeless increased each fiscal year. Homelessness increased from 21.2% in 2000-01 to 37.0% in 2004-05.

PPN Program Participant Primary Drug Problem Trends

According to Table 5.49, during the 2004-05, cocaine/crack (32.4%) and methamphetamine (32.1%) were the two most frequently reported primary drug problems for PPN participants. Methamphetamine use has grown each of five years from 15.6% in 2000-01 to 32.1% in 2004-05. On the other hand, the cocaine/crack use has dropped each fiscal year (from 47.3% to 32.4%). From 2000-01 to 2002-03, heroin use was reported for 1 out of 5 PPN participant, then dropped to approximately 16.0% for the two remaining fiscal years.

Table 5.49 – PPN Program Participant Primary Drug Problem by Fiscal Year

PPN Participant Treatment Compliance Trends

According to Table 5.50, in 2004-05 Fiscal Year, 49.1% of the participants were discharged with a positive treatment compliance status; they were successful in complying with their treatment plan. The five-year average for positive treatment compliance status was 49.5%.

Table 5.50 – PPN Program Participant Treatment Compliance/Discharge Status by Fiscal Year

Proposition 36 Participants in ADPA-Contracted Alcohol and Drug Treatment Programs

Introduction

The Substance Abuse and Crime Prevention Act (SACPA) of 2000, more commonly known as Proposition 36, amended existing drug sentencing laws to require that adult criminal defendants who are convicted of a non-violent drug offense, be placed in drug treatment as a condition of probation, instead of incarceration. The purpose was to enhance public safety by reducing drug-related crime and preserving jail and prison space for violent offenders. Drug treatment, in lieu of incarceration, is also required for State parolees convicted of non-violent drug offenses or who commit drug-related parole violations. Eligible offenders receive up to one year of drug treatment followed by six months of continuing care services. Vocational training, health, mental health, and other services were also provided. Proposition 36 allowed for dismissal of charges upon successful completion of treatment.

The successful implementation and ongoing operation of Proposition 36 in Los Angeles County was made possible because of the coordinated collaboration and constant communication among the Court, ADPA, District Attorney's Office, Probation Department, Public Defender's Office, California Department of Corrections and Rehabilitation, Community Assessment Services Centers, and community-based treatment providers.

Salient points on statewide and local Proposition 36 program admissions and participants follow:

- Altogether, more than 140,000 participants statewide entered treatment in the first four fiscal years of Proposition 36 implementation. During the same time period, Los Angeles County had 36,295 Proposition 36 participants and 43,727 admissions.
- A 2006 review of the first four years of SACPA indicated that more than half of all statewide Proposition 36 participants report methamphetamine as their primary drug of abuse. Los Angeles County reported methamphetamine as the primary drug problem of 33.9% to 38.5% of Proposition 36 participants over four fiscal years. Cocaine/crack was reported by 30.0% to 34.1% of Los Angeles County participants.
- Nearly 48,000 participants throughout the State completed treatment (34.0%) during four fiscal years. In Los Angeles County, positive treatment compliance ranged from 38.9% to 43.8%; they were successful in complying with their treatment plan. During the 2004-05 Fiscal Year, Proposition 36 participants in Los Angeles County had the highest completion rate (24.9%) in four years.

Please note that the number of Proposition 36 participants and admissions reported in the Annual Review are slightly different than what appears in the 2004-05 Proposition 36 Annual Report. The variance between the two reports, approximately 800 cases, is attributable to reporting differences. The Proposition 36 Annual Report includes information received from ADPA-contracted and non-contracted programs. The Annual Review only includes information reported by ADPA-contracted alcohol and drug treatment/recovery programs. However, even with these reporting differences, most of the statistical findings in both reports are the same or very similar.

Chapter 5

Proposition 36 Admissions and Participants Trends

Table 5.51 and Figure 5.11 show steady increase in the number of Proposition 36 program admissions and participants, beginning in 2002-03 Fiscal Year.

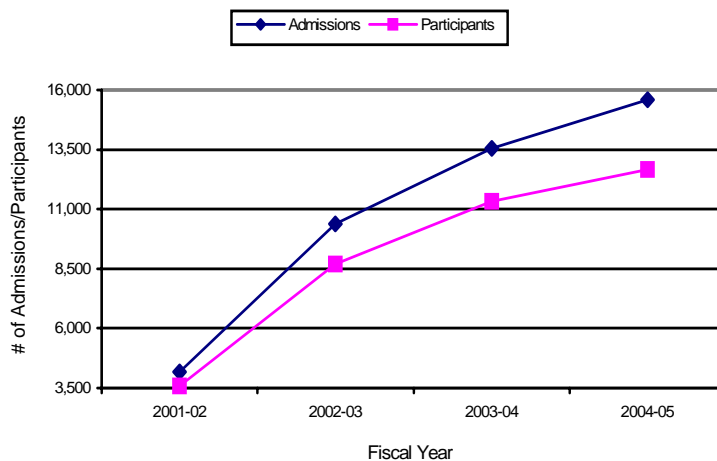

During the 2004-05 Fiscal Year, 12,660 participants accounted for 15,601 admissions; 2,200 (17.4%) of these participants had two or more admissions

Proposition 36 Program Participant Demographic Trends

The characteristics of Proposition 36 participants have remained stable over the four fiscal years. According to 2004-05 Fiscal Year statistical findings:

- 76.7% were male
- 61.2% were between 25 and 44 years of age
- most participants were Latino (40.0%), White (27.3%), or Black/African American (25.0%)
- 64.7% were unemployed
- 14.0% were homeless

Proposition 36 Program Participant Primary Drug Problem Trends

As shown in Table 5.54, in 2001-02 Fiscal Year, cocaine/crack (34.1%) and methamphetamine (33.9%) were the two most frequently reported primary drug problems for Proposition 36 participants. For three of the four fiscal years, methamphetamine has ranked as the number one drug problem. Alcohol (8.8 to 10.3%) and heroin (8.4 to 10.2%) use have remained relatively stable over the four fiscal years.

Table 5.54 – Proposition 36 Program Participant Primary Drug Problem by Fiscal Year

Primary Drug Problem	2001-02		2002-03		2003-04		2004-05

Chapter 6 – LAC Participant Statistics by Agency

Alcohol and Drug Program Administration (ADPA) contracted community-based agencies provide a comprehensive array of alcohol and drug treatment/recovery services for County residents. During the 2004-05 Fiscal Year, ADPA contracted with 151 agencies that provided treatment/recovery services to 60,551 participants. Note a participant can receive treatment/recovery services from more than one agency during the fiscal year. Therefore, the number of participants shown in this chapter is greater than the number of participants shown in Chapter 1.

The vast majority of the contracted agencies provide alcohol and drug treatment/recovery services to both male and female participants. Of the 151 agencies, 10 served only female participants and 6 served only male participants. Listed below are these gender-specific agencies along with the agency's total number of participants, supervisorial district (SD), and service planning area (SPA):

List of Agencies Serving Only Female Participants

<u>No.</u>	<u>Agency Name</u>	<u>Total Participants</u>	<u>SD</u>	<u>SPA</u>

Chapter 7 – LAC Alcohol and Drug Statistical Fact Sheets

Chapter 7 is a selection of statistical “Fact Sheets” which provide information on key Los Angeles County alcohol and drug-related indicators and outcomes. Alcohol and drug-related indicators and outcomes are useful tools for monitoring substance abuse in the community. The primary source for this information was the Los Angeles County Participant Reporting System. Additional information was obtained from State and federal databases and national surveys. The following is a brief description of the indicators and outcomes reported in this chapter:

- **Individual and Public Health**

Alcohol and drug-related death counts are based on medical information from death certificates describing a condition(s) exacerbated by alcohol or illicit drug use, being listed as the immediate, intervening, or underlying cause of death – plus additional information related to the cause of death.

Communicable disease diagnosis pertains to counts of reportable diseases that are directly or indirectly associated, in terms of susceptibility or risk, with alcohol and drug abuse or misuse. Specific indicators include a diagnosis of Hepatitis B and HIV/AIDS.

- **Hospital Services**

Alcohol and drug-related hospital discharges represent inpatient discharge data for patients treated for alcohol and illicit drug abuse in Los Angeles County acute care hospitals reporting statistics to the Office of Statewide Health Planning and Development.

Emergency Department drug mentions and episodes were obtained from the Drug Abuse Warning Network (DAWN) which collects data from a sample of Los Angeles County hospitals on emergency department visits related to recent drug use.

- **Criminal Justice**

Alcohol-related arrests occur when persons are taken into custody because they are believed to have violated alcohol laws such as driving under the influence, public drunkenness, and liquor law infractions.

Drug-related arrests occur when persons are taken into custody because they are believed to have violated drug laws.

- **Alcohol-Related Traffic Accidents**

California Highway Patrol statistics show the number of Los Angeles County motor vehicle accidents, which involved the use of alcohol, specifically, fatal and injury accidents, and persons killed or injured as a result of these accidents.

- **Treatment Utilization**

This refers to all primary alcohol and drug admissions to County-contracted treatment programs.

^{1,2} Alcohol and drug-related death data, beginning in 1999, were based on the Tenth Revision of the International Classification of Diseases (Source: Los Angeles County Department of Public Health - Data Collection, Health Assessment and Epidemiology).

^{3,4} Statistics on AIDS and IVDU AIDS cases presented in this report were obtained from The Los Angeles County HIV/AIDS Surveillance Summary Reports.

⁵ Hepatitis B statistics from 1995 to 2004 were obtained from Los Angeles County Acute Communicable Disease Program.

^{6,7} Emergency Department drug mention and episode data from 1995 – 2002 were obtained from the Drug Abuse Warning Network (DAWN) Reports. 2003 and 2004 data are not available at this time.

^{8,9,10,11} Alcohol and drug-related arrest statistics were recalculated using data from the California Department of Justice website.

* Alcohol-related hospital discharge data for 1995 did not include the expanded alcohol diagnoses.

** Drug-related hospital discharge data for 1995 did not include the expanded drug diagnoses.

† AIDS and IVDU AIDS 2003 and 2004 data are provisional due to reporting delay.
