

Tuberculosis Screening (Pre-Registration is required and enrollment is limited to 12 individuals)
(No continuing education credit is offered for this class)

A comprehensive three-hour course designed to familiarize participants with TB screening guidelines, appropriate placement of the Tuberculin skin test, and interpretation of results. The course includes a practical section where participants are expected to demonstrate the Mantoux technique and reading of the Tuberculin Skin Test. The course also covers information about the newer methods of screening using Interferon Gamma Release Assays (IGRAs). Enrollment is limited to 12 individuals comprised of physicians, registered nurses, and licensed vocational nurses. Because of this limited enrollment, we request that each facility send only one representative to this class.
